I wish to be heard in support of my submission.

I have concerns about the proposed time frames for the implementation of nutrient loads and achievement of water quality and water quantity limits being too long. Shorter time frames would limit the risk of not meeting NPSFW requirements and CWMS targets. This is an over-allocated zone. Too much reliance appears to be placed on farm plans and good management practice to effect the needed change in land use practice.

Many consents are not up for renewal until 2030 which delays the application of the plan rules. There appears to be insufficient interim reviews to monitor any progress.

Thank you
