0-0-0	92.2	Mr David Hendrikz	Ecan should create contour maps which define the top and bottom of water bearing layers. The second step should be for ECan to create a set of rules to define adequate penetration of the target layer and some ideas as follows: 1. To adequately penetrate the target aquifer the bore must be at least 3 meters below the relevant calculated minimum water level; 2. Self-induced drawdown does not draw water level below 1 metre above bore screen; 3. Bore must penetrate either 80% of the water bearing layer of X meters (to be defined on a case by case basis, especially for deep bores) into the water bearing layer.
0-0-0	93.20	Community & Public Health, Christchurch	That the LWRP includes reference to the following publication when calculating separation distances: Moore, C., Nokes, C., Loe, B., Close, M., Pang, L., Smith, V. and Osbaldiston, S. 0-0-0	166.1	Ms Colleen Philip	There are some positives in the proposed Land and Water Regional plan. I particularly like that the management of pollutants which accumulate is being promoted. I would like to make the following points: 1. To leave real change until 2017 is far too long... 2. Existing users should be included from the outset rather than burdening new users with an imbalance of costs for compliance. 3. I totally disagree with the zone committees setting their own water quality standards... 4. The default regional standards I believe do not extend to enough contaminants/toxins e.g. E.coli Please do not use the excuse of "more study needed" to make this a less than robust process. (Specific wording not provided, see submission for further detail)

0-0-0	364.12	Royal Forest & Bird Protection Society of NZ Inc, Canterbury/West Coast Regional Office	<p>Forest and Bird strongly supports the intent of the Plan to limit nutrient and contaminant losses on the basis of their cumulative environmental effects, so that they do not exceed defined parameters, or bottom lines. We also strongly support the setting and achieving of ecologically defensible environmental flows for all water bodies.</p> <p>Although this is the apparent intent of the Plan, it falls short of a credible, definitive path to keeping water contamination within defined limits and bringing environmental flows up to defined levels in several important respects:</p> <ol style="list-style-type: none"> 1. The timelines are too loose: Environmental conditions are almost certain to worsen in the interim as a result. 2. Existing uses, a key vector in creating the current (worsening) situation, are not adequately captured. 3. The Plan needs regionally consistent, ecologically defensible water quality targets and limits for nutrients and contaminants. Forest and Bird adopt Fish and Game's amended Table 1 which in our view better provides these numerical values than the Proposed Plan. 4. Regional limits should be applicable to the whole region. The Proposed Plan encourages each of the 10 zones to decide on their own limits, which then take precedence over the regionally defined limits. This introduces a high level of uncertainty for the environment and is not consistent with the NPS on freshwater. 5. The 'Permitted Activity' status for so many activities does not provide the clearly defined, monitored and enforced compliance regime that is clearly needed to clean up our rivers, lakes and groundwater or prevent them from deteriorating further. <p>No specific text provided.</p>
