Subject: Submissions re Air Regional Plan
Date: Saturday, 28 February 2015 7:12:58 p.m.

J.W.Dieudonne,
4 Tothill Place,
Papanui,
Christchurch, 8053,

Dear Sir,

At the age of 84 and having macular degeneration I find reading the proposed Air Plan pretty difficult, but I am anxious to put forward other rules
I agree to most of the Plan contents available on line, however, regarding city air pollution, the media revealed the number of vehicles have considerably increased in Christchurch and as such must contribute to extra pollutants in the air and I would like to see introduced the following:

1. Vehicle registration to be charged also on the volume of CC of the engine. A 2000 CC car burns more fuel than a 1300 CC car, so charge more too.
2. Commercial deliveries by vehicles before 8 am, this would also reduce congestion on the roads.
3. Correctly insulated apartment buildings containing a number of families or individuals are more economical to heat and give out less pollution.

Of course, there are 'ifs and buts' but many other countries have these rules and we pride ourselves to be a First World Country.

I can't understand why the CCC does not introduce a 'Front Door' tax, meaning that non property owners who have a regular income pays CCC rates.
as they too use the city's infra structure.

With Kind regards,

Johan Willem Dieudonne.
