Importance: Low

Hi Mailroom,

Can you please TRIM and workflow this submission?

Thanks

Charles

8 Cass street,
Temuka 7920

Subject: Submission for Air Quality and pollution:

Smouldering fires are only of owners interest and value.

The effects are felt by other people,
Residents and tourists endure pollution from one owner, smoke trails
in my/our sky and reduces air quality, cleaners, sunlight is
reduced via smoke, the stench from the smoke lingers in homes and
washing.

Smouldering fire smoke brings health and welfare issues, including
respiratory problems in young children and elderly.
I like a clear visual with no stench.

Air Pollution in South Canterbury,
The use of smouldering fire
Smouldering fire being fire with no actual flame.
Incineration using heat and smoke to get rid of forestry, vegetation,
dead animals and rubbish.
The lazy on ground, of no physical input, ignition and leave to take
natural course destruction.
Time frame being up to months or as nature takes it.
Stench of composing and smoke.
Slightly over horizon and sky as nature guides.

I would like action to be taken that would,
Stop the pollution in my world from others that feel they have a god
given right to pollute using smouldering fire,
e.g One vegetation smouldering fire lasted in excess of 10 days just
outside of Temuka, this Autumn smoke, stench, god given ok from
owner, thanks for nothing.
