Your submission Fully support examining opportunities for public rail transport into and out of the city. Given that much of the network is available, this should be able to operate for the morning and evening peak periods no later than 2020/21. The investigation / study should also look at the practicability of double tracking to those localities that would be served by rail as this would provide for more efficient operation of both freight and passenger services.

What do you want Environment Canterbury to do? Have rail transport operating for the morning and evening peak periods no later than 2020/21. Ensure that the investigation / study looks at the practicability of double tracking to those localities that would be served by rail as this would provide for more efficient operation of both freight and passenger services.
