Your submission

What do you want Environment Canterbury to do?

am whole heartedly in support of
allowing wood burning as a
home heating option to continue.

allow even new homes
to install low emission wood
fires.

If you compare ~~smog~~ pollution levels before and after earthquakes
I believe you will find that (in the Eastern area) there is very little
change despite a few thousand homes having been red zoned and
now gone. I believe this points to another source for
pollution levels mainly including traffic from work sites,
Road work vehicles, dust from demolished homes, Dyer

Your submission

What do you want Environment Canterbury to do?

Soil / sand blowing around. Increased Large Vehicle usage. Wood burners are a better heat option in older homes because of the DRY heat they put out as opposed to heat pumps which do cause condensation issues in under insulated, no ~~to~~ double glazed windows ~~of~~ in older homes. Dry heat dries all timber and furnishing in any home where ventilation also occurs.

Yes I believe a funding system should be set to help those in hardship. This should include working ~~families~~ ^{families} who live within their budget and don't have extra for extras.

Other ways to reduce pollution. More dampening down of demolition sites. Filters in exhausts of heavy Machinery. Large trucks carrying demolition ~~work~~ or Soil should be dampened or covered.

In a way you are doing a great job now that nothing needs to be increased (as in performance) once rebuild finished pollution rates should then be reevaluated and the impact the rebuild industry has/is having will be more evident once stopped.

Continue your submission on additional pages if necessary.

Jill Reesby, 49 Basingstoke street (coil)

As a private homeowner my biggest concern is to continue to use my wood burner as a heating and emergency cooking appliance.

I tried looking on-line ~~and~~ to understand the proposal you have put forward and not being that computer savvy or having degree I got waded down and lost, so my submission is based solely on what I read in your 'Tell us what you think Canterbury' booklet that was posted. hopefully there is nothing in your proposals that was not written in your booklet but would affect home heating for now and in the future.

Thank you.
