Your submission

I submit that reducing nutrient flows is a very noble idea. However these reduced limits will be useless if we continue to allow the increase in the number of cows and the increase in the number of dairy farms.

Simply put if ecan sets limits for the present that is a step in the right direction. However if an increase in the number of cows and farms happens then nutrient levels will at best be restored to the present levels or even rise above present levels.

As Waikato federated farmers have suggested a moratorium needs to be put in place.

What do you want Environment Canterbury to do?

Environment Canterbury needs to place a moratorium on stock numbers and urgently research the number of stock units this environment can sustain.
