

## Proposed Canterbury Air Regional Plan

### Further Questions of Hearing Panel on

#### S42A Reply Report

1. The effects on Mauri and the life supporting capacity of air is important to Ngai Tahu. Therefore is it necessary that there is a clear definition of :

- Ambient
- Localised
- Cumulative

and how do these interact to enable the protection of Mauri and the life supporting capacity.

2. **Policy 6.9**

Adverse effects of discharge into air on wahi tapu and wahi taonga and Sites of Significance are of concern to Ngai Tahu.

How does Rule 7.2 and the consent process ensure that TRoNT or Papatipu Runanga will be involved?

3. **Rule 7.2**

Taking the fifth paragraph on page 4-7 (headed Conclusion) of the pCARP as the starting point, were we to find that the deletion of specific reference to sites of significance from the permitted activity rules was inappropriate, could iwi management plans be a mechanism for identifying such sites? And if so, how could this be written into the pCARP and where should it be included?
