

BEFORE THE CANTERBURY REGIONAL COUNCIL

In the matter of: Applications by Lyttelton Port Company Limited to the Canterbury Regional Council to channel deepen dredging at Lyttelton Port

CRC172455 – coastal permit to dredge (disturb the seabed) and deposit material on the seabed

CRC172456 – coastal permit to discharge contaminants and deposit material on the seabed

CRC172522- discharge contaminants into water associated with channel deepening dredging

CRC172523 – discharge permit to discharge contaminants into water associated with maintenance dredging

6th Minute of the Commissioners

Questions to the Applicant

- 1 The Panel's Minute dated 21 April 2017 included questions 7a. and 7b., neither of which were addressed in Lyttelton Port Company's opening, or in the course of evidence, so far as we are aware.
- 2 Question 7b.(i) seems to be pertinent in an additional sense. Simulation modelling was based on overflow intervals of 10, 20 and 30 minutes, but Mr Pronk's evidence at (65.3 – 65.4) indicates a rather longer overflow period which we estimate to be 52.2 minutes.
- 3 Lyttelton Port Company is invited to respond on these matters as soon as possible.

Issued by the Hearing Commissioners

Sir Graham Panckhurst –Chair, Peter Atkinson and Raewyn Solomon

Dated: 24 May 2017
