Hazards, Risk and Resilience Comments

Please provide any comment.

I have received the LTP 2018-2028 and noted the references to "Coastal Hazards". however, it is not clear whether consideration of these hazards includes provision of road access to areas threatened by sea level rises.

The maps associated with the Tonkin and Taylor "Coastal Hazard Assessment, 2015" to the CCC shows that the **road access** to the Teddington flats, Charteris Bay , Diamond Harbour and Purau are liable to sea rise flooding. As I see it, the corrective options are limited to:1 a very expensive series of new roads to avoid the threatened areas; 2. very expensive protective sea walls; 3. a bridge across Lyttelton harbour; 4 Servicing these rapidly growing area entirely by sea; 5. abandoning the communities.

Obviously the decision on which course to take will involve extensive multi-factorial analysis before planning and implementing work can be started, probably extending beyond the period of the present Consultation LTP.

Can you please assure me that this planning is included in this LTP?
