### Freshwater Management Support/Oppose

See page 6 of the Consultation Document.

**Please select one of the following:** I generally agree with the activity proposed for Freshwater Management.

### Freshwater Management Comments

**Please provide any comments.**

One of the first things that indicates a river or stream is in trouble is fall off of invertebrates. They are the key to most living things both native and introduced as they form an important food chain for both birds and fish. The other important factor is the temperature of the water, it is getting to hot with low flows and global warming not helping. I am on a zone committee and have the feeling that not enough thought is being put into this by the ECAN scientists. I am aware that a study was completed by Dr. Donald Scott - Otago University on some Southland rivers which showed this to be the case.

<b>Please select one of the following:</b>	I generally disagree with the activity proposed for the Air Quality.

### Air Quality Comments

#### Please provide any comments.

We have started to make great gains with house hold fire places but we are still letting farmers burn off paddocks. Here in Waimate we have had two months of days with smoke covering the township and out lying areas. Soot was falling in town with sum of the fires. There are better ways of putting the stubs back into the ground these days! I have photos showing it but cannot work out how to show the here.
