Thankyou for the information and options you have put out.

Regarding public transport, would smaller buses work better in Timaru?

Regarding freshwater management, I would support a moratorium on further irrigation schemes and no increase on current takes. I would support more rigorous enforcement of present regulations applying to takes and run-off.

Regarding air quality in Timaru I feel that current policies will lead to better air quality eventually without the need for strict deadlines.

PS I would have used your consultation portal but found it complex and can't understand why a user name and password is necessary when you have my ID number and email address.
