

What We Did

Why did we do this?

We wanted to become aware of our local environment

 Could we find any patterns or correlations in the water quality?

• How could we improve our water quality?

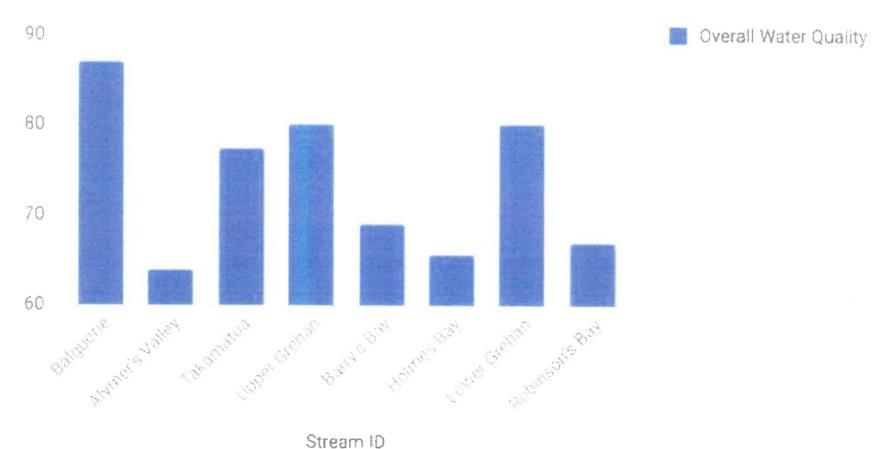

What We Found

Stream ID	Turbidity /100	Nitrates /100	Ph /100)	Phosphates	Microbiologi cal Count /100	Macroinvert ebrate Count /100	Overall weighted score /100
Proportion of overall score	114	.143	.16		.143	23	.21	
Balguerie	99		99	92	6:	2 NA	82	87
Alymer's Valley	96		69	93	81) 21	59	64
Takamatua	95		93	90	8	38	89	77.4
Upper Grehan	97	,	95	92	5!	5 60	90.9	80
Barry's Bay	90		95	92	6) 25	76	69
Holmes Bay	94		70	88	7:	3 25	NA	65.78
Lower Grehan	97		99	91	90	35	90.9	80

Riparian Planting, Native Forest, Exotic Planting, Farmland, Urban...

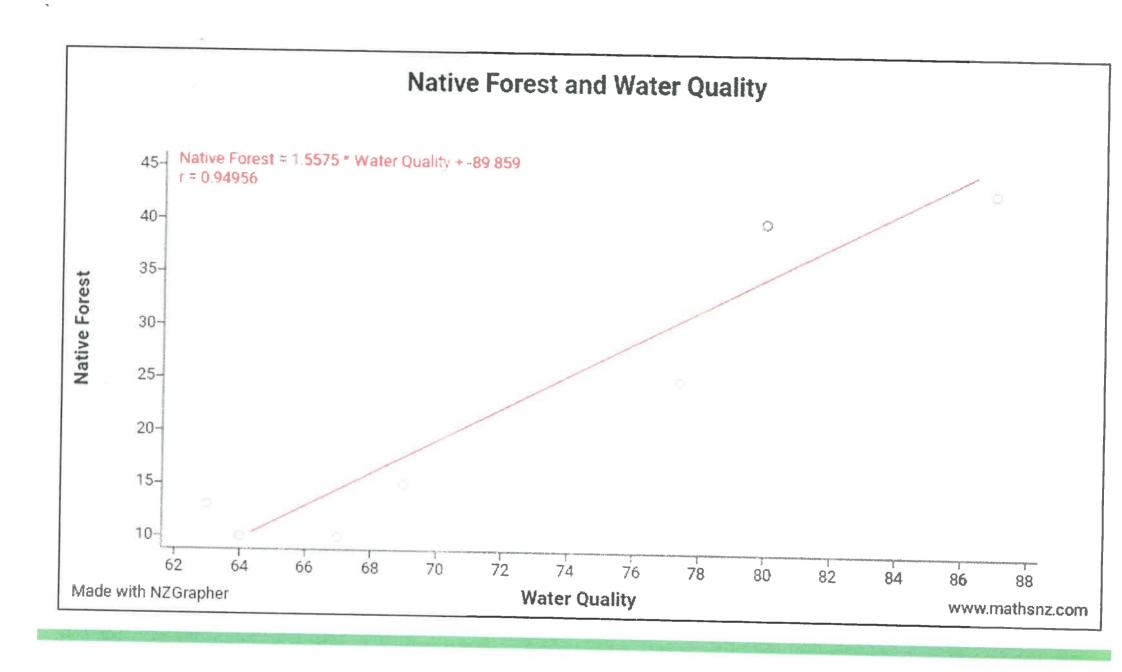

Main Connections

Advantages:

Prevents erosion

Minimises run off

Provides shade, lowering water temperature Keeps livestock away from waterways and increasing oxygen solubility

What would we like to happen

More riparian planting

- Enable people to become more engaged with their local waterways
- For the Council, or more specifically the local Community Board, to lead and promote the idea of public/private partnerships.
- Access central government money.
- Investigate what other Councils/Community Boards have done.

What we would like to see

- More riparian planting (the evidence of the value of riparian is clear-the issue is really not if it should happen but how we can make it happen- here are some of our ideas:
- Enable people to become more engaged with their local water ways (local streams could be tested on a regular basis-say monthly- and the results could be published in the Akaroa Mail and on line. This would enable stream comparisons to be made and for local people to feel motivated to become in involved in local conservation projects)
- For the Council, or more specifically the local Community Board, to lead and promote the idea of public/private partnerships. (The Community Board could provide the environmental expertise and maybe the shrubs and trees while community groups (this could be the community that lives around the stream, or a local school group/runanga/Lions etc) could provide the labour. Fencing of the planted waterways could be shared between DOC/Land owner/Council
- Access central government money. There is a lot of talk in the media about the Billion trees project and Shane Jones \$1 Billion regional development fund. Either of these avenues could be explored for furthering this work.
- Investigate what are Councils/Community Boards have done. (For example the Taranaki Regional Council have been involved in fencing off water ways from stock)
