

CRC190445

CSNDC APPLICANT'S CONDITIONS 8 APRIL 2019

<p>5 November 2018 Conditions</p> <p>(this is the version tabled at the hearing that includes tracked changes from the version that was lodged with the application)</p>	<p>8 February 2019 Conditions</p> <p>(this is the version now proposed by the applicant on 8 February 2019 and includes all those amendments that were at that stage agreed between CCC and CRC staff following the adjournment of the hearing. All amendments are shown in green text)</p>	<p>8 April 2019 – Final Conditions</p> <p>(this is the version now Final version of conditions proposed by the applicant. and includes all those amendments agreed between CCC and CRC reporting staff following the adjournment of the hearing 8 February 2019. All amendments since 8 February 2019 are shown in tracked changes)</p>
<p>Annual Exceedance Probability (AEP) is the chance of a flood of a given or larger size occurring in any one year, usually expressed as a percentage. For example, if a peak flood discharge of 40 cubic metres per second has an AEP of 2%, it means there is a 2% chance (i.e. one-in-fifty) of a peak flood discharge of 40 cubic metres a second or larger being equalled or exceeded in any year. AEP is the inverse of return period expressed as a percentage.</p>	<p>Annual Exceedance Probability (AEP) is the chance of a flood of a given or larger size occurring in any one year, usually expressed as a percentage. For example, if a peak flood discharge of 40 cubic metres per second has an AEP of 2%, it means there is a 2% chance (i.e. one-in-fifty) of a peak flood discharge of 40 cubic metres a second or larger being equalled or exceeded in any year. AEP is the inverse of return period expressed as a percentage.</p>
<p>area of disturbance means an area where site clearance or earthworks are actively taking place and where the land has not been stabilised.</p>	<p>area of disturbance means an area where site clearance or earthworks are actively taking place and where the land has not been stabilised.</p>	<p>area of disturbance means an area where site clearance or earthworks are actively taking place and where the land has not been stabilised.</p>
		<p>Banks Peninsula means the area within Banks Peninsula as defined by the operative Christchurch District Plan (or successor).</p>
		<p>Best Practicable Option is as defined in under the Resource Management Act 1991.</p>
<p>CSNDC means the Christchurch City Council Comprehensive Stormwater Network Discharge Consent.</p>	<p>CSNDC means the Christchurch City Council Comprehensive Stormwater Network Discharge Consent.</p>	
<p>Christchurch Contaminant Load Model (C-CLM) means the Golder Associates (NZ) Ltd 2018 Christchurch Contaminant Load Model (C-CLM). The C-CLM report is attached to this resource consent as Schedule 2.</p>	<p>Christchurch Contaminant Load Model (C-CLM) means the Golder Associates (NZ) Ltd 2018 Christchurch Contaminant Load Model (C-CLM). The C-CLM report is attached to this resource consent as Schedule 2.</p>	<p>Christchurch Contaminant Load Model (C-CLM) means the Golder Associates (NZ) Ltd 2018 Christchurch Contaminant Load Model (C-CLM). The C-CLM report is attached to these conditions as Schedule 2.</p>
<p>critical duration means the time taken during a storm event for peak water levels to be reached in the receiving waters</p>	<p>critical duration means the time taken during a storm event for peak water levels to be reached in the receiving waters</p>	<p>critical duration means the time taken during a storm event for peak water levels to be reached in the receiving waters.</p>
<p>design storm is the theoretical rainfall event that an analysis is based on for a particular probability. The design storm is based on certain assumptions, including rainfall distribution and intensity, and the storm rainfall profile shape for the critical duration.</p>	<p>design storm is the theoretical rainfall event that an analysis is based on for a particular probability. The design storm is based on certain assumptions, including rainfall distribution and intensity, and the storm rainfall profile shape for the critical duration.</p>	<p>design storm is the theoretical rainfall event that an analysis is based on for a particular probability. The design storm is based on certain assumptions, including rainfall distribution and intensity, and the storm rainfall profile shape for the critical duration.</p>
<p>development site means any individual area within a site or sites that is undergoing construction and/or earthworks activities but excludes sealed pavement repair where base course is not exposed.</p>	<p>development site means any individual area within a site or sites that is undergoing construction and/or earthworks activities but excludes sealed pavement repair where base course is not exposed.</p>	<p>development site means any individual area within a site or sites that is undergoing construction and/or earthworks activities but excludes sealed pavement repair where base course is not exposed.</p>
<p>device means a street or property-scale installation for the purpose of removing contaminants from stormwater in a situation where storage capacity is limited. Examples include a rain garden or a proprietary treatment system.</p>	<p>device means a street or property-scale installation for the purpose of removing contaminants from stormwater in a situation where storage capacity is limited. Examples include a rain garden or a proprietary treatment system.</p>	<p>device means a street or property-scale installation for the purpose of removing contaminants from stormwater in a situation where storage capacity is limited. Examples include a rain garden or a proprietary treatment system.</p>

	EMP means Environmental Monitoring Programme.	EMP means Environmental Monitoring Programme.	EMP means Environmental Monitoring Programme.
	existing site means any site that discharges its stormwater into the CCC stormwater network at the date of commencement of this resource consent.	existing site means any site that discharges its stormwater into the CCC stormwater network at the date of commencement of this resource consent.	existing site means any site that discharges its stormwater into the stormwater network at the date of commencement of this resource consent.
	Extra-Over Detention means attenuating sufficient stormwater to control peak flow rates from a developed site back to pre-developed flow rates for storms up to and including the critical 2 percent annual exceedance probability design storm event.	Extra-Over Detention means attenuating sufficient stormwater to control peak flow rates from a developed site back to pre-developed flow rates for storms up to and including the critical 2% -percent-AEP annual exceedance probability design storm event.	Extra-Over Detention means attenuating sufficient stormwater to control peak flow rates from a developed site back to pre-developed flow rates for storms up to and including the critical 2% AEP design storm event.
	facility means a (usually large) constructed means of holding or attenuating stormwater for the purpose of reducing discharge rates or removing contaminants. Examples include a sedimentation basin, a constructed wetland, a wet pond an attenuation basin and/or an infiltration basin.	facility means a (usually large) constructed means of holding or attenuating stormwater, <u>at a larger scale than a device</u> , for the purpose of reducing discharge rates or removing contaminants. Examples include a sedimentation basin, a constructed wetland, a wet pond an attenuation basin and/or an infiltration basin.	facility means a (usually large) constructed method means of holding or attenuating stormwater, at a larger scale than a device, for the purpose of reducing discharge rates or removing contaminants. Examples include a sedimentation basin, a constructed wetland, a wet pond, an attenuation basin and/or an infiltration basin.
	first flush means either: a) the stormwater runoff generated from the first 25 millimetres of rain falling on impervious areas of a site, or b) the stormwater flow rate generated from up to 5mm/hr rainfall intensity on impervious areas of a site; or c) the stormwater runoff generated from the first 20 millimetres of rain falling on impervious areas of a site discharging to rain gardens or tree pits.	first flush means either: a) the stormwater runoff generated from the first 25 millimetres of rain falling on impervious areas of a site, or b) the stormwater flow rate generated from up to 5mm/hr rainfall intensity on impervious areas of a site; or c) the stormwater runoff generated from the first 20 millimetres of rain falling on impervious areas of a site discharging to rain gardens or tree pits.	first flush means either: (a) the stormwater runoff generated from the first 25 millimetres of rain falling on impervious areas of a site; or (b) the stormwater flow rate generated from up to 5mm/hr rainfall intensity on impervious areas of a site; or (c) the stormwater runoff generated from the first 20 millimetres of rain falling on impervious areas of a site discharging to rain gardens or tree pits.
	flat land means any land where the average slope across the site is 5 degrees or less.	flat land means any land where the average slope across the site is 5 degrees or less.	flat land means any land where the average slope across the site is 5 degrees or less.
	greenfield means agricultural, forest or grass land previously undeveloped for urban purposes (construction of residential or industrial subdivision, buildings, roads and associated services).	greenfield means agricultural, forest or grass land previously undeveloped <u>that is to be used</u> for urban purposes, <u>for example</u> {construction of residential or industrial subdivision, buildings, roads and associated services} .	greenfield means agricultural, forest or grass land previously undeveloped that is to be used for urban purposes, for example construction of residential or industrial subdivision, buildings, roads and associated services.
	high-use site means a site that: (a) has an expected average daily traffic (ADT) count equal to or greater than 250 vehicles per day; or (b) is used for petroleum storage or transfer in excess of 5,000 litres per year, not including delivered heating oil; or (c) is used for storage or maintenance of 10 or more heavy vehicles (trucks, buses, trains, heavy equipment, etc.).	high-use site means a site that: (a) has an expected average daily traffic (ADT) count equal to or greater than 250 vehicles per day; or (b) is used for petroleum storage or transfer in excess of 5,000 litres per year, not including delivered heating oil; or (c) is used for storage or maintenance of 10 or more heavy vehicles (trucks, buses, trains, heavy equipment, etc.).	high-use site means a site that: (a) has an expected average daily traffic (ADT) count equal to or greater than 250 vehicles per day; or (b) is used for petroleum storage or transfer in excess of 5,000 litres per year, not including delivered heating oil; or (c) is used for storage or maintenance of 10 or more heavy vehicles (trucks, buses, trains, heavy equipment, etc.).
	hill land means any land where the average slope across the site exceeds 5 degrees.	hill land means any land where the average slope across the site exceeds 5 degrees.	hill land means any land where the average slope across the site exceeds 5 degrees.

	<p>industrial site means:</p> <p>(a) any premises used for the manufacturing, assembly, wholesaling or storage of products or the processing of raw materials and other ancillary activities; or</p> <p>(b) any premises used for the storage, transfer, treatment, or disposal of waste materials or for other waste-management purposes, or used for composting organic materials; or</p> <p>(c) any other premises from which a contaminant is discharged in connection with any industrial or trade process—but does not include any land under agricultural production.</p>	<p>industrial site means:</p> <p>(a) any premises used for the manufacturing, assembly, wholesaling or storage of products or the processing of raw materials and other ancillary activities; or</p> <p>(b) any premises used for the storage, transfer, treatment, or disposal of waste materials or for other waste-management purposes, or used for composting organic materials; or</p> <p>(c) any other premises from which a contaminant is discharged in connection with any industrial or trade process—but does not include any land under agricultural production.</p>
	<p>industrial site means:</p> <p>(a) any premises used for the manufacturing, assembly, wholesaling or storage of products or the processing of raw materials and other ancillary activities; or</p> <p>(b) any premises used for the storage, transfer, treatment, or disposal of waste materials or for other waste-management purposes, or used for composting organic materials; or</p> <p>(c) any other premises from which a contaminant is discharged in connection with any industrial or trade process - but does not include any land under agricultural production.</p>	<p>industrial site means:</p> <p>(a) any premises used for the manufacturing, assembly, wholesaling or storage of products or the processing of raw materials and other ancillary activities; or</p> <p>(b) any premises used for the storage, transfer, treatment, or disposal of waste materials or for other waste-management purposes, or used for composting organic materials; or</p> <p>(c) any other premises from which a contaminant is discharged in connection with any industrial or trade process - but does not include any land under agricultural production.</p>
	<p>Industry Liaison Group means a group of representatives from various industries invited by Christchurch City Council to attend an annual meeting to discuss stormwater discharges under this resource consent.</p>	<p>Industry Liaison Group means a group of representatives from various industries, <u>which will include the Oil Industry Environmental Working Group, Lyttelton Port Company and Ravensdown Limited</u>, invited by Christchurch City Council to attend an annual meeting to discuss stormwater discharges under this resource consent.</p>
	<p>LWRP means Canterbury Land and Water Regional Plan.</p>	<p>LWRP means Canterbury Land and Water Regional Plan.</p>
	<p>papatipu rūnanga means the six Ngāi Tahu Papatipu Rūnanga within the Christchurch area, namely: Te Ngāi Tūāhuriri Rūnanga, Te Hapū o Ngāti Wheke/Rāpaki Rūnanga, Te Rūnanga o Koukourārata, Ōnuku Rūnanga, Wairewa Rūnanga, and Te Taumutu Rūnanga, <u>as represented by Mahaanui Kurataiao Ltd or its successor organisation.</u></p>	<p>papatipu rūnanga means the six Ngāi Tahu Papatipu Rūnanga within the Christchurch area, namely: Te Ngāi Tūāhuriri Rūnanga, Te Hapū o Ngāti Wheke/Rāpaki Rūnanga, Te Rūnanga o Koukourārata, Ōnuku Rūnanga, Wairewa Rūnanga, and Te Taumutu Rūnanga, as represented by Mahaanui Kurataiao Ltd or its successor organisation.</p>
	<p>Partial Detention means storage within first flush basins plus additional storage through flooding of wetland areas to an average depth of 500mm discharging over a minimum of 96 hours for the critical 2 percent annual exceedance probability design storm event.</p>	<p>Partial Detention means storage within first flush basins plus additional storage through flooding of wetland areas to an average depth of 500mm discharging over a minimum of 96 hours for the critical 2 percent annual exceedance probability design storm event.</p>
	<p>Partial Detention means storage within first flush basins plus additional storage through flooding of wetland areas to an average depth of 500mm discharging over a minimum of 96 hours for the critical 2 percent annual exceedance probability % AEP design storm event.</p>	<p>Partial Detention means storage within first flush basins plus additional storage through flooding of wetland areas to an average depth of 500mm discharging over a minimum of 96 hours for the critical 2 percent annual exceedance probability % AEP design storm event.</p>
	<p>QMCI means Quantitative Macroinvertebrate Community Index.</p>	<p>QMCI means Quantitative Macroinvertebrate Community Index.</p>
	<p>re-development-site means a change to a developed site or a site activity that results in a stormwater discharge that <u>has the potential to increase is not the same in the scale, intensity or contaminant content of character to</u> the discharge that existed prior to the commencement of this consent.</p>	<p>re-development means a change to a developed site or a site activity that results in a stormwater discharge that has the potential to increase the scale, intensity or contaminant content of the discharge that existed prior to the commencement of this consent.</p>
	<p>re-development means a change to a developed site or a site activity that results in a stormwater discharge that has the potential to increase the scale, intensity or contaminant content of the discharge that existed prior to the commencement of this <u>resource</u> consent.</p>	<p>re-development means a change to a developed site or a site activity that results in a stormwater discharge that has the potential to increase the scale, intensity or contaminant content of the discharge that existed prior to the commencement of this <u>resource</u> consent.</p>
	<p>River Care Liaison Group means a group of representatives from organisations with a particular interest in the protection and restoration of the natural environment of the Christchurch rivers and their tributaries including wetlands and that are invited by Christchurch City Council to attend an annual meeting to discuss stormwater discharges under this resource consent.</p>	<p>River Care Liaison Group means a group of representatives from organisations with a particular interest in the protection and restoration of the natural environment of the Christchurch rivers and their tributaries including wetlands, and that are invited by Christchurch City Council to attend an annual meeting to discuss stormwater discharges under this resource consent.</p>

		<p>Settlement areas of Banks Peninsula means those areas within Banks Peninsula that are within the following zones, or equivalent zones if they are renamed, under the Christchurch District Plan:</p> <ul style="list-style-type: none"> • Residential Banks Peninsula • Residential Small Settlement • Residential Large Lot • Commercial Banks Peninsula • Open Space Metropolitan Facilities • Specific Purpose (Lyttelton Port) • Industrial General • Specific Purpose (School) • Specific Purpose (Cemetery) • Open Space Community Parks. 	<p>Settlement Areas of Banks Peninsula means those areas within Banks Peninsula that are within the following zones, or equivalent zones if they are renamed, under the Christchurch District Plan:</p> <ul style="list-style-type: none"> • Residential Banks Peninsula • Residential Small Settlement • Residential Large Lot • Commercial Banks Peninsula • Open Space Metropolitan Facilities • Specific Purpose (Lyttelton Port) • Industrial General • Specific Purpose (School) • Specific Purpose (Cemetery) • Open Space Community Parks.
<p>site means an allotment title or other legally defined parcel of land held in a single certificate of title and any balance land or adjacent land with title(s) held by the same owner or ownership with an affiliated interest. In the case of greenfield and re-development, site means the area of land defined by the boundaries of proposed land disturbance.</p>	<p>site means an allotment title or other legally defined parcel of land held in a single certificate of title and any balance land or adjacent land with title(s) held by the same owner or ownership with an affiliated interest. A stage of development is deemed to be finished following the completion of construction activities and when the development area has been stabilised.</p>	
<p>stormwater means runoff from rainfall that has been collected, channelled, diverted, intensified or accelerated by human modification of the land surface or runoff from the external surface of any structure as a result of precipitation and may contain contaminants. This definition excludes discharges of spilled or deliberately released hazardous substances and/or washdown activities.</p>	<p>stormwater means runoff from rainfall that has been collected, channelled, diverted, intensified or accelerated by human modification of the land surface or runoff from the external surface of any structure as a result of precipitation and may contain contaminants. This definition excludes discharges of groundwater, drainage water, spilled or deliberately released hazardous substances and/or washdown activities.</p>	<p>stormwater means runoff <u>water and entrained contaminants arising from precipitation on the external surface of any structure or any land modified by human action, and that has</u> rainfall that has been collected, channelled, diverted, intensified or accelerated by human modification <u>intervention.</u> of the land surface or runoff from the external surface of any structure as a result of precipitation and may contain contaminants. Stormwater excludes discharges of groundwater, drainage water, spilled or deliberately released hazardous substances and/or washdown activities.</p>	
<p>stormwater network means <u>waterways identified in a SMP the Ōtākaro/ Avon River, Huritini/ Halswell River, Ōpāwaho/ Heathcote River, Ōtūkaikino River and the Pūharakekenui/ Styx River and their tributaries</u> and also includes the reticulated piped network, kerb and channel, sumps, pipes, manholes, rapid soakage chambers and any stormwater conveyance and mitigation system for which Christchurch City Council are responsible for operation and maintenance.</p>	<p>stormwater network means <u>waterways identified in a SMP the Ōtākaro/ Avon River, Huritini/ Halswell River, Ōpāwaho/ Heathcote River, Ōtūkaikino River and the Pūharakekenui/ Styx River and their tributaries</u> and also includes the reticulated piped network, kerb and channel, sumps, pipes, manholes, rapid soakage chambers and any stormwater conveyance and mitigation system for which Christchurch City Council are responsible for operation and maintenance. a network owned or operated by the Christchurch City Council of pipes, swales, drains, kerbs and channels that collects stormwater within areas used or proposed to be used for</p>	<p>stormwater network means a network owned or operated by the Christchurch City Council of pipes, swales, drains, kerbs and channels that collects stormwater within areas used or proposed to be used for urban residential, commercial or industrial purposes, and <u>includes</u> any device or facility for the treatment of stormwater <u>owned or operated by the Christchurch City Council</u>, prior to a discharge to land, groundwater or surface water. ‡ <u>Stormwater network</u> excludes any drainage system that has been constructed for the primary purpose of collection, conveyance or discharge of drainage <u>groundwater</u>.</p>	

		urban-residential, commercial or industrial purposes, and any device or facility for the treatment of stormwater, prior to a discharge to land, groundwater or surface water. It excludes any drainage system that has been constructed for the primary purpose of collection, conveyance or discharge of drainage water.	
		Sub-catchment means part of a catchment.	Sub-catchment means part of a catchment.
	surface water means water in waterways, lakes, wetlands, springs, or coastal waters, but excludes groundwater and atmospheric water.	surface water means water in rivers, watercourses and artificial waterbodies, waterways, lakes, wetlands, springs, or coastal waters, but excludes groundwater and atmospheric water.	surface water means water in rivers, watercourses and artificial waterbodies, lakes, wetlands, springs, or coastal waters, but excludes groundwater and atmospheric water.
	SWIM means the Joint Stormwater Management Issues Working Group, or its successor. The SWIM is a forum of senior managers of Christchurch City Council and Canterbury Regional Council established to meet the outcome of on-going communication as detailed in the "Stormwater Management Protocol ¹ ."	SWIM means the Joint Stormwater Management Issues Working Water Issues Management Group, or its successor. The SWIM is a forum of senior managers of Christchurch City Council and Canterbury Regional Council established to meet the outcome of on-going communication as detailed in the "Stormwater Management Protocol¹ 'Joint Christchurch City Council and Environment Canterbury Stormwater Management Protocol (March 2006, Revised September 2008 and November 2010)'	TSS means Total Suspended Solids.
	TSS means Total Suspended Solids.	TSS means Total Suspended Solids.	WIM means the Water Issues Management Group, or its successor. The WIM is a forum of senior managers of Christchurch City Council and Canterbury Regional Council established to meet the outcome of on-going communication as detailed in the 'Joint Christchurch City Council and Environment Canterbury Stormwater Management Protocol (March 2006, Revised September 2008 and November 2010)'

	ACTIVITY Purpose and Location	ACTIVITY Purpose and Location	ACTIVITY Purpose and Location
1	This consent permits the discharge onto or into land or into surface water of stormwater which:	This consent permits authorises the discharge of stormwater stormwater onto or into land or into surface water of stormwater which: <ul style="list-style-type: none"> a. is generated from within the territorial boundaries of Christchurch City Council, or; b. enters the Christchurch City Council stormwater network from outside the Christchurch City Council boundary. 	Except where excluded under Condition 2, this consent authorises the discharge of stormwater onto or into land or into surface water which: <ul style="list-style-type: none"> (a) is generated from within the territorial boundaries of Christchurch City Council; or; (b) enters the Christchurch City Council stormwater network from outside the Christchurch City Council boundary.
	a. is generated from existing sites, greenfield development sites and re- development sites within the territorial boundaries of the Christchurch City Council, and is discharged into the Christchurch City Council stormwater network, but excludes those areas outside of Banks Peninsula settlement areas; or	a. is generated from existing sites, greenfield development sites and re- development sites within the territorial boundaries of the Christchurch City Council, and is discharged into the Christchurch City Council stormwater network, but excludes those areas outside of Banks Peninsula settlement areas; or	
	b. enters the Christchurch City Council stormwater network from outside of the City boundary; or	b. enters the Christchurch City Council stormwater network from outside of the City boundary; or	
	c. is generated from roofs of individual existing sites, greenfield development sites and re-developments sites and is discharged onto or into land within the site; or	c. is generated from roofs of individual existing sites, greenfield development sites and re-developments sites and is discharged onto or into land within the site; or	
	d. is generated from hard-standing areas of individual existing residential sites, residential and non- residential greenfield development and residential and non-residential re- development sites and is discharged onto or into land within the site. <u>Advice Note: For the avoidance of doubt, this consent does not authorise existing discharges into land from non-residential hardstand areas via private stormwater systems.</u>	d. is generated from hard-standing areas of individual existing residential sites, residential and non- residential greenfield development and residential and non-residential re- development sites and is discharged onto or into land within the site. <u>Advice Note: For the avoidance of doubt, this consent does not authorise existing discharges into land from non-residential hardstand areas via private stormwater systems.</u>	
	Exclusions	Exclusions	Exclusions
2	There shall be no discharge to land or surface water from the following unless expressly authorised by Canterbury Regional Council and Christchurch City Council:	This consent excludes excludes discharges from:	This consent excludes discharges from :
	a. Any <u>new activity or re-development in a</u> site or development area on the Canterbury Regional Council's Listed Land Use Register that is considered by Christchurch City Council to pose an unacceptably high risk of surface water or groundwater contamination;	a. Stormwater networks outside the settlement areas of Banks Peninsula; and	(a) <u>Emanating</u> Stormwater networks <u>from land within Banks Peninsula that is</u> outside the Settlement Areas of Banks Peninsula; and
	b. Any stage of during the construction of a development <u>site</u> with a total area of disturbance exceeding 5 hectares on flat land or 1 hectare on hill land; and	b. Private stormwater networks that bypass the Christchurch City Council stormwater network and discharge into the Coastal Marine Area; and	(b) <u>From</u> Private stormwater <u>systems</u> networks that bypass the Christchurch City Council stormwater network (<u>owned and operated by Christchurch City Council</u>) and discharge into the Coastal Marine Area; and
	c. Any site listed on the attached Schedule 1 'Sites excluded from the Christchurch City Council Comprehensive Stormwater Network Discharge Consent' <u>(i) at commencement of this consent; or (ii) as a result of the process set out in condition 3 below, or (iii) as a result of the process set out in condition 41, or (iv) by variation of this consent.</u>	c. Hardstand areas of non-residential existing sites discharging onto or into land via private networks unless the discharge has been previously authorised by the Christchurch City Council; and	(c) <u>Emanating from</u> H hardstand areas of non-residential existing sites discharging onto or into land via private networks unless the discharge has been previously authorised by the Christchurch City Council; and

		<p>d. Any new activity on a site, or re-development of a site, or development area, on the Canterbury Regional Council's Listed Land Use Register that is considered by the Christchurch City Council to pose an unacceptably high risk of surface water or groundwater contamination; and</p> <p><i>Advice Note: The identification of unacceptable high risk will be in the manner required by the memorandum of understanding between the Councils until a risk matrix is finalised.</i></p>	<p>(d) From Any new activity not existing at the commencement of this resource consent on a site, or re-development, of a site, or development site area, on the Canterbury Regional Council's Listed Land Use Register that is considered by the Christchurch City Council to pose an unacceptably high risk of surface water or groundwater contamination; and</p> <p><i>Advice Note: The identification of unacceptable high risk will be in the manner required by the Memorandum of Understanding for Stormwater Discharges in Christchurch City (2014), or successor document, between the Christchurch City Councils and Canterbury Regional Council until a risk matrix is finalised under condition 3 below.</i></p>
		<p>e. Any stage of development with a total area of disturbance exceeding 5 hectares on flat land or 1 hectare on hill land, and;</p>	<p>(e) Emanating from Any stage of a development site with a total area of disturbance exceeding 5 hectares on flat land or 1 hectare on hill land; and;</p>
		<p>f. Any site listed on the attached Schedule 1 'Sites excluded from the Christchurch City Council Comprehensive Stormwater Network Discharge Consent'</p> <ol style="list-style-type: none"> i. at commencement of this consent, or; ii. as a result of the process set out in Condition 3 below, or; iii. as a result of the process set out in Condition 41, or; by variation of this consent. 	<p>(f) From Any site listed on the attached Schedule 1 'Sites excluded from the Christchurch City Council Comprehensive Stormwater Network Discharge Consent':</p> <ol style="list-style-type: none"> (i) at commencement of this resource consent; or; (ii) as a result of the process set out in Condition 3 below; or; (iii) as a result of the process set out in Condition 41;
		Transitional Arrangements	Transitional Arrangements
3	<p>Discharge into the Christchurch City Council stormwater network from the sites excluded by Condition 2 are will be within the scope of authorised under this consent on 1 January 2025, or when current discharge permits expire or are surrendered for those sites, whichever is the latest, unless through the transitional arrangements set out below, or through the audits described in condition 41, the Consent Holder determines that the site poses an unacceptably high risk of surface water or groundwater contamination. The transitional arrangements are:</p>	<p>Discharge into the Christchurch City Council stormwater network from the sites excluded by Condition 2(d), (2)(e) e and f or 2(f) are authorised under this consent on 1 January 2025, or when current discharge permits expire or are surrendered for those sites, whichever is the latest, unless through the transitional arrangements set out below, or through the audits described in Condition 41, the Consent Holder determines that the site discharge poses an unacceptably high risk of surface water or groundwater contamination. The transitional arrangements are:</p>	<p>Discharge into the Christchurch City Council stormwater network from the sites excluded by Conditions 2(d), (2)(e) or 2(f) are authorised under this consent on 1 January 2025, or when current discharge permits expire or are surrendered for those sites, whichever is the latest, unless through the transitional arrangements set out below, or through the audits described in Condition 41, the Consent Holder determines that the discharge poses an unacceptably high risk of surface water or groundwater contamination. The transitional arrangements are:</p>
	<p>(a) Within 6 months of this consent being in legal effect, the Consent Holder will engage with the Canterbury Regional Council to obtain full details of all of the consented activities excluded from this consent until 2025, including information on site activities, conditions and compliance records;</p> <p>(b) On the date on which the previously excluded site comes within the scope of this consent, the discharge from the previously excluded site into the stormwater network shall be subject to standards that result in the same or better environmental outcomes for the quality and quantity of the discharge as those that were in the relevant site specific resource consent issued by the Canterbury Regional Council;</p>	<p>(a) Within 6 months of the commencement of this consent being in legal effect, the Consent Holder will engage with the Canterbury Regional Council to obtain full details of all of the consented discharges activities excluded from this consent until 2025, including information on site activities, conditions and compliance records;</p> <p>(b) Within 30 months of the commencement of this resource consent the Consent Holder shall draft a risk matrix used to identify and rate the risk associated with each of the stormwater discharges. The risk matrix shall be developed as follows:</p> <ol style="list-style-type: none"> i. Within 18 months of the commencement of this consent, the Consent Holder shall prepare a draft risk matrix and provide it to the Industry Liaison Group for comment; 	<p>(a) Within 6 months of the commencement of this resource consent, the Consent Holder shall will engage with the Canterbury Regional Council to obtain full details of all of the consented discharges excluded from this consent until 2025, including information on site activities, conditions and compliance records;</p> <p>(b) Within 30 months of the commencement of this resource consent, the Consent Holder shall draft a risk matrix used to identify and rate the risk associated with each of the stormwater discharges where information has been provided under Condition 3(a), and those discharges described in Condition 2(d) and 2(e). The risk matrix shall be developed as follows:</p>

<p>(c) <u>Within 3 years of this consent being in legal effect, the Consent Holder will deliver to the Canterbury Regional Council a Transition Plan for the excluded sites that includes, but is not limited to:</u></p> <p>(i) <u>a description of the regulatory methods that will be used by the Consent Holder to ensure that previously excluded sites will be subject to standards that achieve required environmental outcomes as described in condition 3(b);</u></p> <p>(ii) <u>a description of how a risk matrix will be used for risk rating and to identify particular high risks and how they will be managed and audited;</u></p> <p>(iii) <u>a description of site specific monitoring plans for particular sites rated high in the risk matrix;</u></p> <p>(iv) <u>a description of the process that the Consent Holder will use to determine, in collaboration with CRC and through engagement with affected site operators, whether a site will remain excluded from authorisation under this consent due to it posing an unacceptably high risk of surface water or groundwater contamination.</u></p>	<p>ii. The Consent Holder shall invite the Industry Liaison Group to provide comment within 2 months;</p> <p>iii. Within 3 months of receiving the comment referenced in Condition 3(c)(ii), the Consent Holder shall prepare a memo and/or revised risk matrix addressing feedback received from the engagement required by Condition 3(c)(i) and circulate it to the Industry Liaison Group along with an invitation to an Industry Liaison Group meeting;</p> <p>iv. Within one month of the meeting held under Condition 3(c)(iii), the Consent Holder shall circulate minutes, including points of agreement and disagreement between the parties;</p> <p>v. Any changes to the draft risk matrix shall be provided to the Industry Liaison Group for feedback no less than 2 months prior to being submitted to Canterbury Regional Council.</p> <p>(c) Within 3 years of the commencement of this consent being in legal effect, the Consent Holder will deliver shall provide to the Canterbury Regional Council a Transition Plan for the discharges excluded by conditions 2(d), 2(e) and 2(f) that includes, but is not limited to:</p> <p>(i) a description of the regulatory methods that will be used by the Consent Holder to ensure that previously excluded discharges sites will be subject to standards that achieve required environmental outcomes as described in condition 3(b);</p> <p>(ii) a description of how a the risk matrix prepared under Condition 3(c) will be used for risk rating and to identify particular high risk and how they will be managed and audited;</p> <p>(iii) a description of site specific monitoring plans for particular sites at which the discharge is rated high in the risk matrix;</p> <p>(iv) a description of the process that the Consent Holder will use to determine, in collaboration with CRG Canterbury Regional Council and through engagement with affected site owners and/or operators, whether a site will remain excluded from authorisation under this consent due to its discharge posing an unacceptably high risk of surface water or groundwater contamination;</p> <p>(d) if as a result of the risk matrix and process set out in condition 3 it is determined that the discharge poses an unacceptably high risk of surface water or groundwater contamination then that discharge will remain excluded from this consent and listed</p>	<p>(i) Within 18 months of the commencement of this consent, the Consent Holder shall prepare a draft risk matrix and provide it to the Industry Liaison Group for comment;</p> <p>(ii) The Consent Holder shall invite the Industry Liaison Group to provide comment within 2 months of providing the draft risk matrix to them for comment;</p> <p>(iii) Within 3 months of receiving the comment referenced in Condition 3(be)(ii), the Consent Holder shall prepare a memo and/or revised risk matrix addressing that comment feedback received from the engagement required by Condition 3(c)(i) and circulate it to the Industry Liaison Group along with an invitation to an Industry Liaison Group meeting;</p> <p>(iv) Within one month of the meeting held under Condition 3(eb)(iii), the Consent Holder shall circulate minutes, including points of agreement and disagreement between the parties;</p> <p>(v) Any changes to the draft risk matrix shall be provided to the Industry Liaison Group for feedback no less than 2 months prior to being submitted to Canterbury Regional Council.</p> <p>(c) Within 3 years of the commencement of this consent, the Consent Holder shall provide to the Canterbury Regional Council a Transition Plan for the discharges excluded by Conditions 2(d), 2(e) and 2(f) that includes, but is not limited to:</p> <p>(i) a description of the regulatory methods that will be used by the Consent Holder to ensure that previously excluded discharges will be subject to standards that achieve required environmental outcomes as described in Condition 3(e);</p> <p>(ii) the risk matrix prepared under Condition 3(b);</p> <p>(iii) a description of site-specific monitoring plans for particular sites at from which the discharge is rated high in the risk matrix;</p> <p>(iv) a description of the process that the Consent Holder will use to determine, in collaboration with Canterbury Regional Council and through engagement with affected site owners and/or operators, whether a site will remain excluded from authorisation under this consent due to its discharge posing an unacceptably high risk of surface water or groundwater contamination;</p> <p>(d) if as a result of the risk matrix and process set out in Condition 3(b) it is determined that the discharge poses an</p>

	a. Demonstrate the means by which the quality of stormwater discharges will be progressively improved towards meeting the Receiving Environment Objectives and Attribute Target Levels for waterways, coastal waters, groundwater and springs, and water quantity, set out in the conditions of this consent and in Schedules 4 to 7;				a. Contribute to meeting the overall contaminant load reduction standards set in Condition 16; b. Set the contaminant load reduction targets required to be developed and set in each SMP and describe how they are to be achieved; c. Demonstrate the means by which the quality of stormwater discharges will be progressively improved towards meeting the Receiving Environment Objectives and Attribute Target Levels for waterways, coastal waters, groundwater and springs, and water quantity, set out in the conditions of this consent and in Schedules 4 to 7;				(a) Contribute to meeting the overall contaminant load reduction standards set in Condition 16A and 16B; (b) Set the contaminant load reduction targets required to be developed and set in each SMP and describe how they are to be achieved A <u>a</u> contaminant load reduction target(s), for that catchment derived from modelling, for each catchment in that SMP area in order to demonstrate the commitment of the Consent Holder to the improvement of stormwater discharge quality over time; (c) Demonstrate the means by which the quality of stormwater discharges will be progressively improved towards meeting the Receiving Environment Objectives and Attribute Target Levels for waterways, coastal waters, groundwater and springs, and water quantity, set out in the conditions of this consent and in Schedules 4 to 7;			
	b. Demonstrate the means by which the stormwater contribution to groundwater and spring-fed stream flows will continue by discharge of stormwater to land infiltration systems where reasonably practicable;				d. Demonstrate the means by which the stormwater contribution to groundwater and spring-fed stream flows will continue by Provide for discharge of stormwater to land infiltration systems where reasonably practicable so as to demonstrate the means by which the stormwater contribution to groundwater and spring-fed stream flows will continue;				(d) Provide for discharge of stormwater to land infiltration systems where reasonably practicable as the means so as to demonstrate that the means by which the stormwater contribution to groundwater and spring-fed stream flows will be maintained continue;			

	c. Demonstrate the means by which Christchurch City Council stormwater infiltration facilities constructed by, or on behalf of, the Consent Holder, after the commencement of this consent shall be designed, located and operated to avoid, remedy or mitigate adverse effects of groundwater mounding on other land in anything more frequent than the critical 2 percent Annual Exceedance Probability Event.	e. Demonstrate the means by which Christchurch City Council stormwater infiltration facilities constructed by, or on behalf of, the Consent Holder, after the commencement of this consent shall be designed, located and operated to avoid, remedy or mitigate adverse effects of groundwater mounding on other land in anything more frequent than the critical 2 percent Annual Exceedance Probability Event.	(e) Demonstrate the means by which Christchurch City Council stormwater infiltration facilities constructed by, or on behalf of, the Consent Holder, after the commencement of this consent shall will be designed, located and operated to avoid, remedy or mitigate adverse effects of groundwater mounding on other land in anything more frequent than the critical 2 <u>% AEP</u> percent annual exceedance probability Event.
	d. Plan the works authorised by this consent;	f. Plan the works authorised by this consent; Describe the works associated with the mitigation of the effects of stormwater discharges within each SMP.	(f) Describe Plan the works required to mitigate associated with the mitigation of the effects of stormwater discharges within each SMP to the extent required by this resource consent.
	e. Implement the conditions of this consent as they apply to each catchment.	g. Implement the conditions of this consent as they apply to each catchment.	(g) Implement the conditions of this consent as they apply to each catchment, including the best practicable option for weed management in the Pūharakekenui/Styx River as determined under Condition 38(x).
6	SMPs submitted to Canterbury Regional Council after the operative date of this consent shall include but not be limited to the following information:	SMPs submitted to Canterbury Regional Council after the commencement operative date of this consent shall include but not be limited to the following information:	SMPs submitted to Canterbury Regional Council after the commencement of this resource consent shall include but not be limited to the following information:
	a. Specific guidelines for implementation of stormwater management within the catchment to achieve the purpose of SMPs;	a. Specific guidelines for implementation of stormwater management within the catchment to achieve the purpose of SMPs;	(a) Specific guidelines for implementation of stormwater management within the catchment to achieve the purpose of SMPs;
	b. A definition of the extent of the stormwater infrastructure, including any portions of waterways, that forms the stormwater network within the catchment for the purposes of this consent;	b. A definition of the extent of the stormwater infrastructure, including any portions of waterways, that forms the stormwater network within the catchment for the purposes of this consent;	(b) A definition of the extent of the stormwater infrastructure, that forms the stormwater network within the SMP area catchment for the purposes of this consent;
		c. A contaminant load reduction target for that catchment derived from modelling. The best available model or method and input data shall be used to define catchment-specific contaminant load reduction targets under each SMP in order to demonstrate the commitment of the Consent Holder to the improvement of stormwater discharge quality over time.	(c) A contaminant load reduction target (s) for each catchment within that SMP area and a description of the process and considerations used in setting the contaminant load reduction target(s) required by Condition 5(b) for that catchment using the best reasonably practicable model or method and input data; derived from modelling. The best available model or method and input data shall be used to define catchment-specific contaminant load reduction targets under each SMP in order to demonstrate the commitment of the Consent Holder to the improvement of stormwater discharge quality over time.
	c. A description of statutory and non-statutory planning mechanisms to achieve compliance with the conditions of this consent including the requirement to improve discharge water quality. These mechanisms will include (but are not limited to): i. Relevant objectives, policies, standards and rules in the Christchurch District Plan; ii. Relevant bylaws; iii. Relevant strategies, codes, standards and guidelines;	d. A description of statutory and non-statutory planning mechanisms being used by the Consent Holder to achieve compliance with the conditions of this consent including the requirement to improve discharge water quality. These mechanisms will shall include (but are not limited to): i. Relevant objectives, policies, standards and rules in the Christchurch District Plan; ii. Relevant bylaws; and iii. Relevant strategies, codes, standards and guidelines.	(d) A description of statutory and non-statutory planning mechanisms being used by the Consent Holder to achieve compliance with the conditions of this consent including the requirement to improve discharge water quality. These mechanisms shall include: (i) Relevant objectives, policies, standards and rules in the Christchurch District Plan; (ii) Relevant bylaws; and (iii) Relevant strategies, codes, standards and guidelines.

	<p>d. Mitigation methods to achieve compliance with the conditions of this consent including the requirement to improve discharge water quality <u>under Conditions 20 and 21</u>. These methods may include (but are not limited to):</p> <ul style="list-style-type: none"> i. Stormwater mitigation facilities and devices; ii. Erosion and sediment control guidelines; iii. Education and awareness initiatives on source control systems and site management programmes; iv. Support for third party initiatives on source control reduction methods; v. Prioritising stormwater treatment in catchments that discharge: in proximity to areas of high ecological or cultural value, such as habitat for threatened species <u>or Areas of Significant Natural Value under the Regional Coastal Environment Plan (Canterbury Regional Council, 2012)</u>, and or in areas with high contaminant loads; 	<p>e. Mitigation methods to achieve compliance with the conditions of this consent including the requirement to improve discharge water quality under Conditions 20 and 24, and to meet the contaminant load reduction targets for each catchment as determined through the SMPs and the standards for the whole of Christchurch set in Condition 16. These methods shall include:</p> <ul style="list-style-type: none"> i. Stormwater mitigation facilities and devices; ii. Erosion and sediment control guidelines; iii. Education and awareness initiatives on source control systems and site management programmes; iv. Support for third party initiatives on source control reduction methods; v. 	Water Quality and Quantity Standards						Water Quality and Quantity Standards						Water Quality and Quantity Standards					
19	For any development or redevelopment within a catchment which does not have a certified SMP, stormwater quality and quantity mitigation shall meet the General City conditions as specified in Schedule 3.						For any development or redevelopment within a catchment which does not have a certified SMP, stormwater quality and quantity mitigation shall meet the General City conditions as specified in Schedule 3.						For any development or redevelopment within a catchment which does not have a certified SMP, stormwater quality and quantity mitigation shall meet the General City conditions as specified in Schedule 3.					
20	The Consent Holder shall use reasonably practicable measures reasonable endeavours to mitigate the effects of the discharge of stormwater on surface water quality, instream sediment quality, aquatic ecology health and mana whenua values. The extent of mitigation of effects shall be measured by the Receiving Environment Objectives and Attribute Target Levels monitoring described in Schedules 4 and 5.						The Consent Holder shall use reasonable endeavours best practicable options to mitigate the effects of the discharge of stormwater on: a. surface water quality, instream sediment quality, aquatic ecology health and mana whenua values. The extent of mitigation of effects shall be measured by the Receiving Environment Objectives and Attribute Target Levels monitoring described in Schedules 4 and 5, b. groundwater and spring water quality. The extent of mitigation of effects shall be measured by the Receiving Environment Objectives and Attribute Target Levels monitoring described in Schedule 6, c. water quantity. The extent of mitigation of effects shall be measured against achievement of by the Receiving Environment Objectives and Attribute Target Levels monitoring described in Schedule 7.						The Consent Holder shall use best practicable options to mitigate the effects of the discharge of stormwater on: (a) Surface water quality, instream sediment quality, aquatic ecology health and mana whenua values. The extent of mitigation of effects shall be measured by the Receiving Environment Objectives and Attribute Target Levels monitoring described in Schedules 4 and 5; (b) Groundwater and spring water quality. The extent of mitigation of effects shall be measured by the Receiving Environment Objectives and Attribute Target Levels monitoring described in Schedule 6; and (c) Water quantity. The mitigation of effects shall be measured against achievement of the Receiving Environment Objective and Attribute Target Levels monitoring described in Schedule 7.					
21	The Consent Holder shall use reasonably practicable measures reasonable endeavours to mitigate the effects of the discharge of stormwater on groundwater and spring water quality. The extent of mitigation of effects shall be measured by the Receiving Environment Objectives and Attribute Target Levels monitoring described in Schedule 6.						The Consent Holder shall use reasonably practicable measures reasonable endeavours to mitigate the effects of the discharge of stormwater on groundwater and spring water quality. The extent of mitigation of effects shall be measured by the Receiving Environment Objectives and Attribute Target Levels monitoring described in Schedule 6.											

22	The Consent Holder shall use reasonable endeavours reasonably practicable measures to mitigate the effects of the discharge of stormwater on water quantity. The extent of mitigation of effects shall be measured against achievement of by the Receiving Environment Objectives and Attribute Target Levels monitoring described in Schedule 7.	The Consent Holder shall use reasonable endeavours reasonably practicable measures to mitigate the effects of the discharge of stormwater on water quantity. The extent of mitigation of effects shall be measured against achievement of by the Receiving Environment Objectives and Attribute Target Levels monitoring described in Schedule 7.	
23	The Consent Holder shall use reasonable endeavours reasonably practicable measures to ensure that construction phase stormwater quality mitigation is implemented for all development sites prior to commencement of stripping of vegetation or earthworks on the site.	The Consent Holder shall use reasonably practicable measures to ensure that construction phase stormwater quality mitigation is implemented in accordance with the erosion and sediment control toolbox or successor document for all development sites prior to commencement of stripping of vegetation or earthworks on the site.	The Consent Holder shall use reasonably practicable measures to ensure that construction phase stormwater quality mitigation is implemented in accordance with the Erosion and Sediment Control Toolbox for Canterbury or successor document for all development sites prior to commencement of stripping of vegetation or earthworks on the site.
24	The Consent Holder shall use reasonable endeavours reasonably practicable measures to ensure that operational phase stormwater quality and quantity mitigation is implemented for all development and re-development (where required) prior to issuing certification under the relevant legislation.	The Consent Holder shall use reasonably practicable measures to ensure that operational phase stormwater quality and quantity mitigation is implemented for all development and re-development (where required) prior to issuing certification under the relevant legislation.	The Consent Holder shall use reasonably practicable measures to ensure that operational phase stormwater quality and quantity mitigation is implemented for all development and re-development (where required) prior to issuing certification under the relevant legislation.
25	The Consent Holder shall provide retrofit water quality and quantity mitigation for existing development where practicable.	The Consent Holder shall provide retrofit water quality and quantity mitigation for existing development where practicable.	The Consent Holder shall provide retrofit water quality and quantity mitigation for existing development where practicable.
			25A Until the commencement of the targeted trial required by Condition 38(w), when the dry weather base flow water level in the Pūharakekenui/Styx River is at or above Reduced Level 10.1m Christchurch Drainage Datum, as measured at the Lower Pūharakekenui/Styx water level gauge, the consent holder shall ensure that the Pūharakekenui/Styx River is the next river from which weed is harvested and that this will commence no later than 40 days following the measurement date.
	Design of Facilities and Devices	Design of Facilities and Devices	Design of Facilities and Devices
26	Water quality and quantity mitigation facilities and devices shall be designed in general accordance with the Christchurch City Council's Waterways, and Wetlands and Drainage Guide, Infrastructure Design Standard, Construction Standard Specifications, Christchurch Rain Garden Design Criteria, Christchurch Stormwater Tree Pit Design Criteria and Stormfilter™ Design Rainfall Intensity Criterion Report or their respective successor document(s).	Water quality and quantity mitigation facilities and devices shall be designed in general accordance with: a. the Christchurch City Council's Waterways, Wetlands and Drainage Guide, Infrastructure Design Standard, Construction Standard Specifications, Christchurch Rain Garden Design Criteria, Christchurch Stormwater Tree Pit Design Criteria and Stormfilter™ Design Rainfall Intensity Criterion Report or their respective successor document(s), b. other national and international best practice design criteria that may become available over the duration of this resource consent, c. the following design requirements for facilities within 3 kilometres of Christchurch International Airport to ensure the risk of bird strike is minimised: i. stormwater infiltration basins to fully drain within 48 hours of the cessation of a 2% AEP stormwater event; ii. ensure there is sufficient rapid soakage overflow capacity to minimise the ponding of stormwater outside of the infiltration area(s); and iii. limit attractiveness to birds through landscaping design and the use of suitable non-bird attracting species.	Water quality and quantity mitigation facilities and devices shall be designed in general accordance with: (a) The Christchurch City Council's Waterways, Wetlands and Drainage Guide, Infrastructure Design Standard, Construction Standard Specifications, Christchurch Rain Garden Design Criteria, Christchurch Stormwater Tree Pit Design Criteria and Stormfilter™ Design Rainfall Intensity Criterion Report or their respective successor document(s); and (b) Other national and international best practice design criteria that adopted by the Christchurch City Council may become available over the duration of this resource consent. 26A e. To ensure the risk of bird strike is minimised , the following design requirements shall apply to facilities within 3 kilometres of Christchurch International Airport to ensure the risk of bird strike is minimised: (i) Stormwater infiltration basins to shall fully drain within 48 hours of the cessation of a 2% AEP stormwater event;

			<p>(ii) ensure there is Sufficient rapid soakage overflow capacity shall be provided to minimise the ponding of stormwater outside of the infiltration area(s); and</p> <p>(iii) Landscape design shall limit attractiveness to birds through landscaping design and the use of suitable non-bird attracting species.</p>
27	The Consent Holder shall ensure that all stormwater quality mitigation facilities and devices servicing greenfield development after commencement of this consent are designed to treat the first flush.	The Consent Holder shall ensure that all stormwater quality mitigation facilities and devices servicing greenfield development after commencement of this consent are designed to treat the first flush.	The Consent Holder shall ensure that all stormwater quality mitigation facilities and devices servicing greenfield development after commencement of this resource consent are designed to treat the first flush.
28	For all water quality mitigation facilities and devices constructed after commencement of this consent to service re-development, or retrofit water quality mitigation facilities for existing development, reasonable endeavours shall be taken to design facilities that treat the first flush.	For all water quality mitigation facilities and devices constructed after commencement of this consent to service re-development, or retrofit water quality mitigation facilities for existing development, the Consent Holder reasonable endeavours shall be taken to design facilities to treat as much of the first flush as reasonably practicable design facilities that treat the first flush.	For all water quality mitigation facilities and devices constructed after commencement of this resource consent to service re-development, or retrofit water quality mitigation facilities for existing development, the Consent Holder shall design facilities to treat as much of the first flush as reasonably practicable.
29	All stormwater mitigation facilities and devices constructed after commencement of this consent shall meet any other specific requirements as specified within the Implementation Plan.	All stormwater mitigation facilities and devices constructed after commencement of this consent shall meet any other specific requirements as specified within the Implementation Plan when prepared in accordance with Condition 12.	All stormwater mitigation facilities and devices constructed after commencement of this consent shall meet any other specific requirements as specified within the Implementation Plan when prepared in accordance with Condition 132 .
30	Christchurch City Council stormwater infiltration facilities constructed after the commencement of the consent shall be located to maintain the following separation distances from domestic and community drinking water supply wells that exist prior to the construction of the infiltration facility:	Christchurch City Council stormwater infiltration facilities constructed after the commencement of the consent shall be located to maintain the following separation distances from domestic and community drinking water supply wells that exist prior to the construction of the infiltration facility:	Christchurch City Council stormwater infiltration facilities constructed after the commencement of the resource consent shall be located to maintain the following separation distances from domestic and community drinking water supply wells that exist prior to the construction of the infiltration facility:
	<u>a. Infiltration devices that only discharge roof water from a single building or that discharge stormwater generated from an impervious area less than 2,000 m2 (including roof area), shall maintain a separation distance from any drinking-water supply well outside of a zone equivalent to the protection areas specified in Table S1A of Schedule 1 of the Canterbury Land and Water Regional Plan, unless, in the case of private drinking water bores, the Consent Holder has made a reticulated water supply available to the property.</u>	a. Infiltration devices that only discharge roof water from a single building or that discharge stormwater generated from an impervious area less than 2,000 m2 (including roof area), shall maintain a separation distance from any domestic and community drinking-water supply well outside of a zone equivalent to the protection areas specified in Table S1A of Schedule 1 of the Canterbury Land and Water Regional Plan, unless, in the case of private drinking water bores, the Consent Holder has made a reticulated water supply available to the property;	(a) Infiltration devices that only discharge roof water from a single building or that discharge stormwater generated from an impervious area less than 2,000 square metres (including roof area), shall maintain a separation distance from any domestic and community drinking-water supply well outside of a zone equivalent to the protection areas specified in Table S1A of Schedule 1 of the LWRP Canterbury Land and Water Regional Plan , unless, in the case of private drinking water bores, the Consent Holder has made a reticulated water supply available to the property.
	<u>b. Infiltration devices for larger discharges than those described in a) above shall maintain a separation distance of 2000 m when located up- gradient of domestic drinking water supply wells; and Infiltration devices shall maintain a separation distance of 500 m when located down-gradient or cross-gradient of domestic drinking water supply wells, unless, in the case of private drinking water bores, the Consent Holder has made a reticulated water supply available to the property;</u>	b. Infiltration devices for larger discharges than those described in a) above shall maintain a separation distance of 2000 m when located up- gradient of domestic and community drinking water supply wells; and infiltration devices shall maintain a separation distance of 500 m when located down-gradient or cross-gradient of domestic and community drinking water supply wells, unless, in the case of private drinking water bores, the Consent Holder has made a reticulated water supply available to the property;	(b) Infiltration devices for larger discharges than those described in a) above shall maintain a separation distance of 2,000 metres when located up- gradient of domestic and community drinking water supply wells; and infiltration devices shall maintain a separation distance of 500 metres when located down-gradient or cross-gradient of domestic and community drinking water supply wells, unless, in the case of private drinking water bores, the Consent Holder has made a reticulated water supply available to the property.

	c. Or as an alternative to a) and b), a shorter separation distance may be utilised based on an assessment of site specific information undertaken by the Consent Holder and certified that it will not have an adverse effect on a domestic drinking water supply well by the Canterbury Regional Council, RMA Monitoring and Compliance Manager.	c. Or as an alternative to a) and b), a shorter separation distance may be utilised based on an assessment of site specific information undertaken by the Consent Holder and certified by the Canterbury Regional Council, Attention: Regional Leader – Monitoring and Compliance that it will not have an a less than minor adverse effect on a domestic and community drinking water supply wells; RMA Monitoring and Compliance Manager	(c) Or as an alternative to (a) and (b), a shorter separation distance may be utilised based on an assessment of site-specific information undertaken by the Consent Holder and certified by the Canterbury Regional Council, Attention: Regional Leader – Monitoring and Compliance that it will have a less than minor adverse effect on domestic and community drinking water supply wells.
	d. <u>Within 24 months of this consent becoming operative, a site-specific assessment of contamination risk and appropriate mitigation shall also be undertaken for any existing stormwater infiltration basins that do not comply with the separation distances defined in b) above. This assessment will be provided to the Canterbury Regional Council, RMA Monitoring and Compliance Manager for certification that it will not have an adverse effect on a domestic drinking water supply well.</u>	d. Within 24 months of this consent becoming operative commencing, a site-specific assessment of contamination risk and appropriate mitigation shall also be undertaken for any existing stormwater infiltration basins that do not comply with the separation distances defined in b) above. Schedule 2: Christchurch Contaminant Load Model

Schedule 3: General City Conditions – Water Quality and Quantity

This table indicates minimum requirements to enable discharges under this consent from greenfield developments and re-developments in areas not yet covered by a Stormwater Management Plan. Until 1 January 2025, for any development where the Christchurch City Council (CCC) considers there are factors that require Canterbury Regional Council input it can choose to not accept a proposed discharge to its network, and therefore a consent from the Regional Council would be required. The CCC may also require a higher standard than is represented in the table below in order to mitigate effects on the network or if any special conditions exist.

Source of Stormwater Discharge(s)	SMALL SITES Total area of disturbance does not exceed 1,000m ²	LARGE SITES Total area of disturbance equals, or is greater than 1,000m ²
From/during land disturbance activities	Erosion and Sediment Control Plan is required	Erosion and Sediment Control Plan is required
From new / re-development residential roof and hardstand areas	<p>No discharge onto or into land where average site slope exceeds 5 degrees</p> <p>Sumps collecting runoff from new hardstand areas shall be fitted with submerged or trapped outlets wherever practicable</p> <p>An assessment of water quantity effects and provision of on-site stormwater storage or network upgrade may be required for sites in the flat**</p> <p>On-site rain water storage is required for new and redevelopment sites on the hills</p>	<p>No discharge onto or into land where average site slope exceeds 5 degrees</p> <p>First flush treatment is required for stormwater runoff from new hardstand areas in excess of 150m² and buildings with copper or uncoated galvanised metal roofs or guttering/spouting*</p> <p>An assessment of water quantity effects and provision of on-site stormwater storage or network upgrade may be required for sites in the flat**</p> <p>On-site rain water storage is required for new and redevelopment sites on the hills</p>
From new / re-development non-residential roof and hardstand areas	<p>No discharge onto or into land where average site slope exceeds 5 degrees</p> <p>First flush treatment is required for stormwater runoff from new hardstand areas in excess of 150m², buildings with copper or uncoated galvanised roofs or guttering/spouting and high-use sites</p> <p>An assessment of water quantity effects and provision of on-site stormwater storage or network upgrade may be required**</p> <p>Site management and spill procedures required for sites that engage in hazardous activities***</p>	<p>No discharge onto or into land where average site slope exceeds 5 degrees</p> <p>First flush treatment is required for stormwater runoff from new hardstand areas in excess of 150m², buildings with copper or uncoated galvanised roofs or guttering/spouting and high-use sites</p> <p>An assessment of water quantity effects and provision of on-site stormwater storage or network upgrade may be required**</p> <p>Site management and spill procedures required for sites that engage in hazardous activities***</p>

* CCC has discretion to waive the requirement for first flush treatment of hardstand areas on large residential sites where the amount of pollution-generating hardstand being added is considered to have less than minor effect. "Uncoated" means without a painted or enamelled coating.

** Quantity assessment and mitigation - The effects of the discharge on stormwater network capacity and/or the extent or duration of flooding on downstream properties are to be assessed. Where CCC considers an increase (including cumulative increases) has a more than minor effect, onsite stormwater attenuation or stormwater network upgrade shall be provided. The details of storage volume and peak discharges or network capacity required to mitigate effects on flooding or network capacity constraints shall be determined by the Christchurch City Council Planning Engineer.

*** Site management and spill procedures – Procedures are to be implemented to prevent the discharge of hazardous substances or spilled contaminants discharging into any land or surface waters via any conveyance path.

Schedule 4: Receiving Environment Objectives and Attribute Target Levels for Waterways -

- **The EMP outlines the methodology for the monitoring of Attributes and how these will be compared against Attribute Target Levels**
- TBC-A = To Be Confirmed once a full year of monitoring allows hardness modified values to be calculated, in accordance with Condition 45.
- TBC-B = To Be Confirmed following engagement with papatipu rūnanga, through an update to the EMP, in accordance with Condition 47.

Objective	Attribute	Attribute Target Level	Basis for Target
Enhance ecological values <u>Ecological values are at acceptable levels</u> Adverse effects on ecological values do not occur due to stormwater inputs	QMCI	Lower limit QMCI scores: <ul style="list-style-type: none"> • Spring-fed – plains – urban waterways: 3.5 • Spring-fed – plains waterways: 5 • Banks Peninsula waterways: 5 	QMCI is an indicator of aquatic ecological health, with higher numbers indicative of better quality habitats, due to a higher abundance of more sensitive species. QMCI scores are taken from the guidelines in Table 1a of the LWRP (Canterbury Regional Council, 2017 8). This metric is designed for Wadeable sites and should therefore be used with caution for non-wadeable sites. These targets can be achieved through reducing contaminant loads and waterway restoration.
Decrease sediment input to prevent adverse effects on water clarity and aquatic biota <u>Adverse effects on water clarity and aquatic biota do not occur due to sediment inputs</u>	Fine sediment (<2 mm diameter) percent cover of stream bed TSS concentrations in surface water	Upper limit fine sediment percent cover of stream bed: <ul style="list-style-type: none"> • Spring-fed – plains – urban waterways: 30% • Spring-fed – plains waterways: 20% • Banks Peninsula waterways: 20% Upper limit concentration of TSS in surface water: 25 mg/L during base flow, and 100 mg/L during wet weather No statistically significant increase in TSS concentrations <u>in surface water</u>	Sediment (particularly from construction) can decrease the clarity of the water, and can negatively affect the photosynthesis of plants and therefore primary productivity within streams, interfere with feeding through the smothering of food supply, and can clog suitable habitat for species. These se <u>sediment cover</u> Target Levels are taken from the standards for the original Styx and South-West Stormwater Management Plan consents, and are based on Table 1a of the LWRP (Canterbury Regional Council, 2017 8). These targets should be used with caution at sites that likely naturally have soft-bottom channels. These targets can be achieved through reducing contaminant loads (particularly using erosion and sediment control) and instream sediment removal.
Reduce copper, lead and zinc levels in surface water to prevent adverse effects on aquatic biota <u>Adverse effects on aquatic biota do not occur due to copper, lead and zinc inputs in surface water</u>	Zinc, copper and lead concentrations in surface water	Upper limit concentration of dissolved zinc: <ul style="list-style-type: none"> • Ōtākaro/ Avon River catchment: 0.0297 mg/L • Ōpāwaho/ Heathcote River catchment: 0.04526 mg/L • <u>Cashmere Stream: 0.00724 mg/L</u> • Huritini/ Halswell River catchment: 0.01919 mg/L • Pūharakekenui/ Styx River catchment: 0.01214 mg/L • Ōtukaikino River catchment: 0.00868 mg/L • Linwood Canal: 0.146 mg/L • Banks Peninsula catchments: TBC-A Upper limit concentration of dissolved copper: <ul style="list-style-type: none"> • Ōtākaro/ Avon River catchment: 0.00356 mg/L • Ōpāwaho/ Heathcote River catchment: 0.00543 mg/L • <u>Cashmere Stream: 0.00302 mg/L</u> • Huritini / Halswell River catchment: 0.00336 mg/L • Pūharakekenui/ Styx River catchment: 0.00212 mg/L • Ōtukaikino River catchment: 0.00152 mg/L • Linwood Canal: 0.0175 mg/L • Banks Peninsula catchments: TBC-A 	These metals can be toxic to aquatic organisms, negatively affecting such things as fecundity, maturation, respiration, physical structure and behaviour. The CCC has developed these hardness modified trigger values in accordance with the methodology in the 'Australian and New Zealand Environment and Conservation Council, and Agriculture and Resource Management Council of Australia and New Zealand' (ANZECC, 2000) guidelines, and the species protection level relevant to each waterway in the LWRP (Canterbury Regional Council, 2017 8). This calculation document can be provided on request. These targets can be achieved primarily through reducing contaminant loads.

Objective	Attribute	Attribute Target Level	Basis for Target
		<p>Upper limit concentration of dissolved lead:</p> <ul style="list-style-type: none"> • Ōtākaro/ Avon River catchment: 0.01554 mg/L • Ōpāwaho/ Heathcote River catchment: 0.02916 mg/L • Cashmere Stream: 0.00521 mg/L • Huritini / Halswell River catchment: 0.01257 mg/L • Pūharakekenui/ Styx River catchment: 0.00634 mg/L • Ōtukaikino River catchment: 0.00384 mg/L • Linwood Canal: 0.167 mg/L • Banks Peninsula catchments: TBC-A <p>No statistically significant increase in copper, lead and zinc concentrations</p>	
<p>Reduce nutrient levels to limit excessive growth of macrophytes and filamentous algaeExcessive growth of macrophytes and filamentous algae does not occur due to nutrient inputs</p>	<p>Total macrophyte and filamentous algae (>20 mm length) cover of stream bed</p>	<p>Upper limit total macrophyte cover of the stream bed:</p> <ul style="list-style-type: none"> • Spring-fed – plains – urban waterways: 60% • Spring-fed – plains waterways: 50% • Banks Peninsula waterways: 30% <p>Upper limit filamentous algae cover of the stream bed:</p> <ul style="list-style-type: none"> • Spring-fed – plains – urban waterways: 30% • Spring-fed – plains waterways: 30% • Banks Peninsula waterways: 20% 	<p>Macrophyte and algae cover are indicators of the quality of aquatic habitat. Targets are taken from Table 1a of the LWRP (Canterbury Regional Council, 20178). Improvement towards these targets can be achieved by reduction in nutrient concentrations and riparian planting to shade the waterways.</p>
<p>Improve instream sediment quality to prevent adverse effects on aquatic biotaAdverse effects on aquatic biota do not occur due to zinc, copper, lead and PAHs in instream sediment</p>	<p>Zinc, copper, and lead and PAHs concentrations in instream sediment</p>	<p>Upper limit concentration of total recoverable metals for all classifications:</p> <ul style="list-style-type: none"> • Copper = 65 mg/kg dry weight • Lead = 50 mg/kg dry weight • Zinc = 200 mg/kg dry weight • Total PAHs = 4 10 mg/kg dry weight <p><u>No statistically significant increase in copper, lead, zinc and Total PAHs</u></p>	<p>Meta Metals can bind to sediment and remain in waterways, potentially negatively affecting biota. These trigger values are based on the ISQG-low ANZECC (2000) guidelines (<u>ANZECC, 2018; Stuart Simpson et al., 2013</u>). These targets can be achieved through reducing contaminant loads and instream sediment removal.</p>
<p>Enhance mana whenua freshwater valuesMana whenua freshwater values are at acceptable levelsAdverse effects on Mana Whenua values do not occur due to stormwater inputs</p>	<p>Waterway Cultural Health Index and State of Takiwā scores</p>	<p>Lower limit averaged Waterway Cultural Health Index and State of Takiwā scores for all classifications:</p> <ul style="list-style-type: none"> • Spring-fed – plains – urban waterways: TBC-B • Spring-fed – plains waterways: TBC-B Banks Peninsula waterways: TBC-B 	<p>The Waterway Cultural Health Index assesses cultural values and indicators of environmental health, such as mahinga kai (food gathering). These indices are on a scale of 1 - 5, with higher scores indicative of greater cultural values. No guidelines are available currently for the different types of waterways, so these targets will be developed specifically for this consent, with higher targets for waterways with higher values. These targets can be achieved through reducing contaminant loads and habitat restoration.</p>

Schedule 5: Receiving Environment Objectives and Attribute Target Levels for Coastal Waters

- The EMP outlines the methodology for the monitoring of Attributes and how these will be compared against Attribute Target Levels
- TBC-B = To Be Confirmed following consultation with papatipu rūnanga, through an update to the EMP, in accordance with Condition 47.

Objective	Attribute	Attribute Target Level	Basis for Target
Reduce sediment input to prevent adverse effects on water clarity and aquatic biota <u>Adverse effects on water clarity and aquatic biota do not occur due to sediment inputs</u>	TSS concentrations in surface water	No statistically significant increase in TSS concentrations	Elevated levels of TSS in the water column decrease the clarity of the water and can adversely affect aquatic plants, invertebrates and fish (Crowe & Hay, 2004; Ryan, 1994). For example, sediment can affect photosynthesis of plants and therefore primary productivity, interfere with feeding through the smothering of food supply, and can clog suitable habitat for species (Crowe & Hay, 2004; Ryan, 1994). There is no guideline available for this parameter, so no change in concentrations is proposed to be conservative. The target will be achieved by reducing contaminant loads (particularly using erosion and sediment control measures).
Decrease copper, lead and zinc levels in water to prevent adverse effects on aquatic biota <u>Adverse effects on aquatic biota do not occur due to copper, lead and zinc inputs in surface water</u>	Copper, lead and zinc concentrations in surface water	Maximum dissolved metal concentrations for all classes (with the exception of the Operational Area of the Port of Lyttelton): <ul style="list-style-type: none"> • Copper: 0.005 0.0013 mg/L • Lead: 0.005 0.0044 mg/L • Zinc: 0.05 0.015 mg/L <p>No statistically significant increase in copper, lead and zinc concentrations (with the exception of the Operational Area of the Port of Lyttelton)</p>	Metals, in particular, copper, lead and zinc, can be toxic to aquatic organisms, negatively affecting such things as fecundity, maturation, respiration, physical structure and behaviour (Harding, 2005). Site specific criteria are set out in the Regional Coastal Environment Plan for the Canterbury Region (Canterbury Regional Council, 2012). The plan specifically details that this guideline is not relevant for the Operational Area of the Port of Lyttelton. These targets are taken from the ANZECC (2000) guidelines for the protection of 95% of species. This Operational Area of the Port of Lyttelton area is affected by direct discharges from boats that will make monitoring of the effects of stormwater difficult, therefore the targets are not applicable to this area. These targets will be achieved by reducing contaminant loads.
Enhance mana whenua coastal values <u>Mana whenua coastal values are at acceptable levels</u> <u>Adverse effects on Mana Whenua values do not occur due to stormwater inputs</u>	Marine Cultural Health Index and State of Takiwā scores	Minimum averaged Marine Cultural Health Index and State of Takiwā scores for all classes: <ul style="list-style-type: none"> • TBC-B 	The Marine Cultural Health Index and State of Takiwā scores assesses cultural values and indicators of environmental health, such as mahinga kai (food gathering). These indices are on a scale of 1 - 5, with higher scores indicative of greater cultural values. No guidelines are available currently for coastal areas, so this target will be developed specifically for this consent. These targets can be achieved through reducing contaminant loads.

Schedule 6: Receiving Environment Objectives and Attribute Target Levels for Groundwater and Springs

- The EMP outlines the methodology for the monitoring of Attributes and how these will be compared against Attribute Target Levels

Objective	Attribute	Attribute Target Level	Basis for Target
<i>Protect drinking water quality</i>	Copper, lead, zinc and <i>Escherichia coli</i> concentrations in drinking water	<p>Concentration to not exceed:</p> <ul style="list-style-type: none"> • Dissolved Copper: 0.5 mg/L • Dissolved Lead: 0.0025 mg/L • Dissolved Zinc: 0.375 mg/L <p>No statistically significant increase in the concentration of <i>Escherichia coli</i> at drinking water supply wells</p>	The most important use of Christchurch groundwater is the supply of the urban reticulated drinking water supply. Contaminants in stormwater that infiltrate into the ground could impact on the quality of water supply wells and/or springs. The compliance criteria for a potable and wholesome water supply are specified in the Drinking-Water Standards for New Zealand 2005 (Revised 2008). Metals and <i>E.coli</i> were chosen for these targets, as these are contaminants present in stormwater. The target values for copper and lead are a quarter of the Maximum Acceptable Value (MAV) or Guideline Value (GV) taken from the Drinking Water Standards for New Zealand 2005 (revised 2008). This is to ensure investigations occur before the water quality limits in the LWRP are exceeded, which are that concentrations are not to exceed 50% of the MAV. An equivalent criteria has also been applied to the zinc target, which is not included in the LWRP water quality limits, but has a guideline in the drinking water standards.
<i>Avoid widespread adverse effects on shallow groundwater quality</i>	Electrical conductivity in groundwater	<ul style="list-style-type: none"> • No statistically significant increase in electrical conductivity 	Contaminants in stormwater that infiltrate into the ground could impact on groundwater quality. Long term groundwater quality at monitoring wells is undertaken by Canterbury Regional Council. Those monitoring points that occur within the urban area could be impacted by CCC stormwater management activities. Electrical conductivity is to be used as an indicator for identifying <u>any general</u> changes in <u>groundwater quality related to recharge</u> metals (particularly copper, lead, zinc).

Schedule 7: Receiving Environment Attribute Target Levels for Water Quantity

MODELLED CATCHMENTS			
Objective for the management of stormwater quantity:			
To mitigate the risk of inundation, damage to downstream property or infrastructure or human safety through management of stormwater run-off volumes and peak flows. The degree of mitigation will be measured against the attribute target levels for each receiving environment.			
Attribute Target Level: Modelled flood levels for the 2% AEP for the assessment year critical duration event shall not increase more than the Maximum Increase listed below when compared to the modelled 2% AEP for the baseline year impervious scenario critical duration, as determined using CCC flood models. The baseline year scenario and assessment year scenario shall be identical except for changes to the impervious area, mitigation measures and the inclusion of any new network(s) that has arisen between the dates of the two scenarios and within the city limits. All non-variant scenario parameters shall be as at the assessment year scenario. The critical duration shall be assessed at the monitoring location of the attribute target level.			
Receiving Environment	Monitoring Location	Baseline Year	Maximum Increase (mm)
Ōtākaro/ Avon River	Gloucester Street Bridge	2014	50
Pūharakekenui/ Styx River	Harbour Road Bridge	2012	120 00 +/- 20%
Ōpāwaho/ Heathcote River	Ferniehurst Street	1991	30
Huritini / Halswell River	Minsons Drain confluence*	2016	0
NON-MODELLED CATCHMENTS			
Receiving Environment	Attribute Target Level	Basis for Target	Notes
Ōtukaikino River	Discharges from all new greenfield development into the Christchurch City Council network are mitigated using the "Partial Detention" strategy outlined in the Pūharakekenui/ Styx SMP until such time as a monitoring location can be set during review of the SMP	As measured through the CCC discharge authorisation compliance process for Resource and Building Consents until such time as an Baseline Year can be set during review of the SMP	CCC does not monitor or model flooding in the Ōtukaikino River has just begun monitoring the Ōtukaikino at Dickeys Road Bridge. Council does not currently model flooding in the Ōtukaikino River. Flooding occurs primarily due to backwater effects in the Waimakariri River. Therefore, a best practice approach to mitigation of development will be implemented until such time as Maximum Increase can be set during review of the SMP.
Banks Peninsula (Various)	Discharges from all new greenfield development within settlement areas of Te Pātaka o Rākaihautū/ Banks Peninsula into the Christchurch City Council Network are mitigated using the "Extra-Over Detention" strategy	As measured through the CCC discharge authorisation compliance process for Resource and Building Consents	Receiving environments within Te Pātaka o Rākaihautū/ Banks Peninsula Settlements are primarily coastal. The strategy behind "Extra-Over Detention" is to mitigate peak flows from development sites back to pre-development flow rates in order to mitigate effects of flooding and waterway channel erosion. Therefore, a best practice approach to mitigation of development will be implemented.

* The Minsons Drain confluence with the Huritini/Halswell River represents the southerly extent of inputs from Christchurch City catchments, but also contains discharges from Selwyn District. Inputs from catchments outside of the city shall be isolated in the CCC stormwater model for compliance assessment purposes.
