Reasons comment:

I consider the applied for site to be prudent. Quarry material is required by the community for all manner of projects which improve quality of life for communities. The location of this quarry is well placed from the perspective of current and future growth in the local area. This site is a reasonable distance from built up areas and within proximity of where the product would likely be used. This saves on transport costs and given much of the product could be expected to be used on capital projects, lowers the tax burden for the entire community. Given increased awareness of the environmental impact of 'carbon miles' it is heartening that this location could also indirectly be an environmentally friendly option. The employment opportunities for this quarry are significant. Not only will people be directly employed but the wider community will have opportunity from construction and service contracts, additionally extra money will flow into that community from the workers. It is my opinion the proposed mitigations for this quarry will leave a minimal impact upon those residing in the vicinity. Modern, well run quarries are very good at achieving this.
