Reasons comment:

The supply of quality quarry aggregates is vital to ensure the infrastructure and housing needs are met for the Christchurch and Selwyn Communities going forward, the location of the Roydon site is ideal to ensure this with the minimal disruption to the communities it will serve. Further reasons are set out below in support of this application. 1. The new Roydon Quarry at Jones Road will be a direct replacement of Pound road so it will offer many employment opportunities in the area. 2. It will allow for a continuation of high quality aggregate supply that is essential for the growth predictions of the future of the region. 3. The fact that 90% of the truck movements from the proposed site will go directly to State Highway 1 is really beneficial to the current congested traffic flows on the rural and minor roads. 4. The infrastructure in and around Christchurch needs continual work and the continued supply of high quality aggregate will help to meet these needs. 5. Fulton Hogan are an operator who cares for the environment and they will ensure that there is first class dust suppression. 6. The proposed building of the bunds will enhance the landscape for the site, it will also ensure the noise does not travel. 7. The smaller open areas of the site will make it much more appealing than the current big open quarries. 8. Fulton Hogan have the financial resources to ensure this is a site of the future and leads the way in how a quarry should be run.
