Subject: Plan change 7 to the LWRP submission

Categories: Cathy

How dare you threaten the drinking water quality of the residents of Christchurch. Thousands could develop cancer from any increase in nitrates in our water. You should be working hard to reduce the nitrates leaching into our groundwater.

There must not be a higher rate of nitrates allowed, you know it takes years to get into the water, are you hoping you will all be dead before the problem you are creating is discovered?? When the cancer rate escalates so high the government of the day steps in and asks "who allowed this to happen". Stop it now and think of your children and grandchildren, they could be the envy of the world if you help protect their future drinking water. Why are you even called Environment Canterbury, you are killing our environment. I am so disgusted you could think about passing this plan change. We do not need more dairy, we do need healthy people.
