Subject: Plan Change 7 to the LWRP Submission

To whom it may concern,

As a ratepayer and concerned citizen the nitrate levels in Canterbury need to be reduced drastically. We do not want nutrient leaching from the Waimakariri River into our groundwater and it's deep wells. Christchurch has very good clean water and should be nitrate free. Increasing the water in the Waimakariri River will put our clean water at risk. It is bad enough 1080 is getting into waterways around the rest of the country. We do not want our water poisoned.

Regards
