Subject: Plan Change 7 to the LWRP Submission
Date: Wednesday, 11 September 2019 9:27:54 PM

I agree to the setting of limits to nitrates and other nutrients for ground water and rivers that will restrict any further increases and I would like to see higher required nitrogen reductions within this plan.

Nitrate contamination levels of 3.8 mg/l that are proposed are far to high.

Graham Fenwick and Chris Hickey

Both have evidence suggesting levels 1mg/l to be high, I therefore would like to see the levels be set below this level.

3.8mg/l is dangerous for ecosystems and human health, please look at/after the well-being of the environment over monetary gain/gdp.

Thank you.
