Subject: plan change 7 to the LWRP submission
Date: Thursday, 12 September 2019 7:17:15 PM

i wish to make a submission that I do not agree and oppose policy 4.102 this change interferes with fish and games functions under

section 7 of the RMA it is also contrary to the water conservation orders where recognised waters are protected for spawning and angling

considering the fact that ECAN have already bugged most of our fisheries through lack of prudent management I find this plan

change abhorrent

. If it was mandated that politicians and councilors had to drink the water that they expect the public to have to swim in our waters would still

be clean.

Ecan were told in 1998 by ron docherty and tony humphries of nz salmon anglers that water was over allocated and a moratorium should be

placed until the effects were known.

Now the public is incurring millions of dollars of extra costs of consultants / so called experts because common sense wasnt used

now we have high nitrates in our water and a whole host of other environmental challenges.

Sure we all want a better economy but you cant kill the goose that laid the golden egg. The economy could still have prospered albeit at

a slower pace the government says the FASTER YOU GO THE BIGGER THE MESS well what happened to our water

. Trout and salmon wont inhabit a river when polluted they are not an invasive fish but a sports fish they provide a

massive boost to the economy for residents and visitors alike the reason I moved here to new zealand like many other people was for

trout and salmon fishing these fish should be afforded every protection available as their species contributes a lot to society and are no more

aliens than you I or any other person that came here

. sports fishing keeps thousands of children focussed enjoying the outdoor life off computers not being vandals this should be encouraged
