Subject: Ecan Plan Change 7 - protect our water
Date: Friday, 13 September 2019 8:52:17 AM

Please accept this submission regarding Ecan's Plan Change 7.

1) Nobody has the right to destroy the amazingly pure aquifers that run under Chch and provide our drinking water and Ecan should be acting to protect it 2) the health , environmental , and financial costs of this are huge and fall to the people of ChCh who get none of the financial benefits of the farming in ther Waimakariri area 3)Protection of the aquifer needs to be fast and it needs to reduce nitrates very dramatically so they dont go above a level that is less than 1mg/L - or something similar.

The goal has to be to significantly reduce nitrates and all toxic chemicals getting into our water. Thank you for respecting the water ways and taking urgent, appropriate steps to clean and protect and safeguard our precious water in New Zealand.
