## 2. Hazard Identification

### Approval

This product is an approved substance under the Hazardous Substances and New Organisms Act (HSNO, Approval HSR002545, Construction Products (Toxic [6.7A]) Group Standard 2017). The aggregate in its granular form is considered non hazardous, however there may be traces of respirable dust present which may contain crystalline silica. This fraction has been classified as hazardous according to the criteria in the Hazardous substances (Minimum Degrees of Hazard) Notice 2017.

### Classes  

<table>
<thead>
<tr>
<th>Class</th>
<th>Hazard Statement</th>
</tr>
</thead>
<tbody>
<tr>
<td>6.7A</td>
<td>H350 - May cause cancer if inhaled (contains crystalline silica)</td>
</tr>
<tr>
<td>6.9A</td>
<td>H372 - Causes damage to organs through prolonged or repeated exposure if inhaled. (may cause silicosis and effects to the lungs)</td>
</tr>
</tbody>
</table>

### SYMBOLS

**DANGER**

### Other Classifications

There are no other classifications that are known to apply.

### Precautionary Statements

P103 - Read label before use.  
P201 - Obtain special instructions before use.  
P202 - Do not handle until all safety precautions have been read and understood.  
P260 - Do not breathe dust.  
P281 - Use personal protective equipment as required.  
P308+P313 - IF exposed or concerned: Get medical advice/ attention.
3. Composition / Information on Ingredients

This is a commercial product whose exact ratio of components may vary. Trace quantities of impurities are also likely.

4. First Aid

**General Information**
You should call the National Poisons Centre if you feel that you may have been harmed by this product. The number is 0800 764 766 (0800 POISON) (24 hr emergency service).

If medical advice is needed, have this SDS, product container or label at hand. If exposed or concerned: Get medical advice/attention.

**Recommended first aid facilities**
Ready access to running water is recommended. Accessible eyewash is recommended

**Exposure**

**Swallowed**
Do NOT induce vomiting. Give a glass of water to drink. Contact a doctor if experiencing symptoms.

**Eye contact**
If product gets in eyes, wash material from them with running water for several minutes. If symptoms persist, seek medical advice.

**Skin contact**
This product is non-irritating to skin. No further measures should be required.

**Inhaled**
If coughing, dizziness or shortness of breath is experienced, remove the patient to fresh air immediately. If patient is unconscious, place in the recovery position (on the side) for transport and contact a doctor.

**Advice to Doctor**
Treat symptomatically. See Section 11 for information on potential long term health effects from exposure to very fine crystalline silica dust.

5. Firefighting Measures

**Fire and explosion hazards:** There are no specific risks for fire/explosion for this chemical. It is non-combustible.

**Suitable extinguishing substances:** Not applicable.

**Unsuitable extinguishing substances:** Unknown.

**Products of combustion:** Product does not burn. Dust may form irritating atmosphere. Product will react exothermically with water. Contaminated water will be strongly alkaline. Product may decompose in a fire and produce toxic or corrosive fumes.

**Protective equipment:** Self-contained breathing apparatus. Safety boots, non-flammable overalls, gloves, hat and eye protection.

**Hazchem code:** NA

6. Accidental Release Measures

**Containment**
Emergency plans to manage any potential spills must be in place.

**Emergency procedures**
In the event of large spillage alert the fire brigade to location and give brief description of hazard. Wear protective equipment to prevent respiratory exposure. Clear area of any unprotected personnel. Sweep up the solid. Avoid creating dust. If appropriate, use a gentle water spray to wet material to minimise dust generation.

**Clean-up method**
Collect and seal in properly labelled containers or drums for disposal or recycling.

**Disposal**
Sweep up and collect recoverable material into labelled containers for recycling or salvage. This material may be suitable for approved landfill. Dispose of only in accord with all regulations.

**Precautions**
Wear protective equipment to prevent the inhalation of dusts. Work up wind or increase ventilation.
7. Storage & Handling

Storage
Stable under normal use and storage conditions.

Handling
Keep exposure to dusts to a minimum, and minimise the quantities kept in work areas. Minimise dust generation and accumulation. See section 8 with regard to personal protective equipment requirements. Avoid eye contact and inhalation of dust.

8. Exposure Controls / Personal Protective Equipment

Workplace Exposure Standards
A workplace exposure standard (WES) has not been established by WorkSafe NZ for this product. There is a general limit of 3mg/m³ for respirable particulates and 10mg/m³ for inhalable particulates when limits have not otherwise been established.

<table>
<thead>
<tr>
<th>NZ Workplace Exposure Stds</th>
<th>Ingredient</th>
<th>WES-TWA (as respirable dust)</th>
<th>WES-STE L</th>
</tr>
</thead>
<tbody>
<tr>
<td>Crystalline Silica (all forms)*</td>
<td>0.1mg/m³</td>
<td>no data</td>
<td></td>
</tr>
</tbody>
</table>

* WorkSafe considers its current WES-TWA of 0.1 mg/m³ for silica-crystalline (respirable dust) to be inadequate to protect workers exposed in the workplace, based on current knowledge. It is proposed that WorkSafe adopt WES-TWA for silica-crystalline of 0.05 mg/m³ (respirable fraction).

Engineering Controls
In industrial situations, it is expected that employee exposure to hazardous substances will be controlled to a level as far below the WES as practicable by applying the hierarchy of control required by the Health and Safety at Work Act (2015) and the Health and Safety at Work (General Risk and Workplace Management) Regulations 2016. Exposure can be reduced by process modification, use of local exhaust ventilation, capturing substances at the source, or other methods. If you believe airborne concentrations of mists, dusts or vapours are high, you are advised to modify processes or increase ventilation.

Personal Protective Equipment

Eyes
Protective eyewear is not normally necessary when using this product. However, it always prudent to use protective eyewear if dust is likely.

Skin
Avoid repeated or prolonged skin contact. Wear overalls, rubber boots and impervious gloves. Replace frequently. Gloves should be checked for tears or holes before use. Remove protective clothing and wash exposed areas with soap and water prior to eating, drinking or smoking. Wash contaminated clothing before re-use.

Respiratory
To prevent irritation a well fitted dust mask should be used (this is not recommended when exposure is close to the WES). A fine particulate half or full face respirator with an effective seal is recommended when airborne concentrations approach the WES (section 8). If sanding, grinding, crushing or cutting material contain sand, it is possible that the silica dust WES will be exceeded hence a respirator will be required.

WES Additional Information
Air monitoring to measure the overall amount of silica dust created at various positions on the worksite and the maximum level of worker exposure (given the use of dust control methods, respirators and other measures) should be carried out on a regular bases or when new work methods or equipment is introduced. Air monitoring can be carried out by occupational hygienists or other trained personnel.

9. Physical & Chemical Properties

10. Stability & Reactivity

**Stability**
Stable

**Conditions to be avoided**
Containers should be kept closed in order to avoid contamination. Avoid the creation of dust.

**Incompatible groups**
None known

**Hazardous decomposition products**
None known

**Hazardous reactions**
None known

11. Toxicological Information

**Summary**
IF SWALLOWED: No adverse effects anticipated under normal use conditions.
IF IN EYES: Fine dust may cause irritation when in direct contact.
IF ON SKIN: No adverse effects anticipated under normal use conditions.
IF INHALED: Short term (acute) silicosis can occur with one-off exposures to extremely high levels of fine crystalline silica dust. Other short term effects include irritation, choking and difficulty breathing.

**CHRONIC EFFECTS:** This substance does contain traces fine respirable crystalline silica. Crystalline silica inhaled in the form of quartz or cristobalite from occupational sources is carcinogenic to humans (IARC Group 1). The carcinogenicity of silica is related to long term (e.g., 10 years) inhalation of very fine particulate (e.g., crushing of rock, sand blasting or dry cutting of bricks/concrete). Carcinogenicity of silica appears linked to development of silicosis (see systematic below) followed by complications and, eventually lung cancer. In addition to silicosis there is some evidence that exposure to respirable crystalline silica may be linked to scleroderma and an increased risk of kidney disease.

**Supporting Data**

### Acute

**Oral**
Not considered acutely toxic if swallowed.

**Dermal**
Not considered acutely toxic by dermal contact.

**Inhaled**
The substance is not considered acutely toxic if inhaled, however there may be irritation of the respiratory tract if dust is inhaled. Short term (acute) silicosis (see “systemic” below) can also occur with one-off exposures to extremely high levels of fine crystalline silica dust. Other short term effects include irritation, choking and difficulty breathing.

**Eye**
The mixture is not considered to be an eye irritant. Dust may be an eye irritant (mechanical irritation).

**Skin**
The mixture is not considered to be a skin irritant.

### Chronic

**Sensitisation**
No ingredient present at concentrations > 0.1% is considered a sensitizer.

**Mutagenicity**
No ingredient present at concentrations > 0.1% is considered a mutagen.

**Carcinogenicity**
The dust resulting from this product does contain crystalline silica. Crystalline silica inhaled in the form of quartz or cristobalite from occupational sources is carcinogenic to humans (IARC Group 1). Crystalline Silica triggers 6.7A classification (confirmed carcinogen). The carcinogenicity of silica is related to long term (e.g., 10 years) inhalation of very fine particulate (e.g., from sand blasting or dry cutting of quartz containing substrates). Carcinogenicity of silica appears linked to development of silicosis (see systematic below) followed by complications and, eventually lung cancer.

**Reproductive / Developmental**
No ingredient present at concentrations > 0.1% is considered a reproductive or developmental toxicant or have any effects on or via lactation.

**Systemic**
The dust of this product is considered to be a target organ toxicant, because of the presence of crystalline silica. Crystalline silica triggers 6.9A classification if it is in the form of a fine respirable dust in an occupational (chronic exposure) setting. This is due to the development of silicosis which can occur following exposure to extremely high levels of fine silica dust. Silicosis is a type of pneumoconiosis – a disease of the lung that causes inflammation, scar tissue, lesions and fibrosis in the lung (alveolar). Symptoms include shortness of breath, cough, fever, loss of appetite and cyanosis (bluish skin). Silicosis can occur following prolonged exposure (e.g., 10 years) to relatively high levels of fine crystalline silica dust.

**Aggravation of existing conditions**
Persons with existing lung conditions may be at a higher risk of further adverse health effects (as above). Smokers have an increased risk of lung cancer and silicosis.
12. Ecological Data

Summary
This mixture is not considered harmful or ecotoxic.

Supporting Data

13. Disposal Considerations

Restrictions
There are no product-specific restrictions, however, local council and resource consent conditions may apply, including requirements of trade waste consents.

Disposal method
Disposal of this product must comply with the Hazardous Substances (Disposal) Notice 2017 and the requirements of the Resource Management Act for which approval should be sought from the Regional Authority. The substance must be treated and therefore rendered non-hazardous before discharge to the environment.

Contaminated packaging
Disposal of contaminated packaging must comply with the Hazardous Substances (Disposal) Notice 2017 clause 12. Ensure that the package is rendered incapable of containing any substance and is disposed in a manner that is consistent with the requirements of the substance it contained and the material of the package. If possible reuse or recycle packaging.

14. Transport Information

This mixture is not considered a dangerous good for transport on land.

UN number: NA
Proper shipping name: NA
Class(es) NA
Packing group: NA
Precautions: NA
Hazchem code: 1T (recommended)

15. Regulatory Information

This product is an approved substance under the Hazardous Substances and New Organisms Act (HSNO). Approval code: HSR002545: Construction Products (Toxic [6.7A]) Group Standard 2017. All ingredient appear on the NZIoC.

Specific Controls
Key workplace requirements are:

- SDS: To be available within 10 minutes in workplaces storing any quantity.
- Inventory: An inventory of all hazardous substances must be prepared and maintained.
- Packaging: All hazardous substances should be appropriately packaged including substances that have been decanted, transferred or manufactured for own use or have been supplied.
- Labelling: Must comply with the Hazardous Substances (Labelling) Notice 2017.
- Emergency plan: Required if > 1000kg is stored.
- Certified handler: Not required.
- Tracking: Not required.
- Bunding and secondary containment: Required if > 1000kg is stored.
- Signage: Required if > 10000kg is stored.
- Location compliance certificate: Not required.
- Flammable zone: Not required.
- Fire extinguisher: Not required.

Note: The above workplace requirements apply if only this particular substance is present. The complete set of controls for a location will depend on the classification and total quantities of other substances present in that location.

Other Legislation
In New Zealand, the use of this product may come under the Resource Management Act and Regulations, the Health and Safety at Work Act 2015 and the Health and Safety at Work (General Risk and Workplace Management) Regulations 2016, local Council Rules and Regional Council Plans.
