3. Privacy: Please note that submissions are public. Your name and submission (excluding your contact details) will be included in papers that are available to the media and public which may include publication on the Council website. Your submission will only be used for the purpose of the notified resource consent process.

As a family with a residential house and business located at 383 Springs Road and 347 Marshs Road we are strongly opposed to this resource consent proposal in its entirety.

We are concerned for the health and well-being of ourselves, family, staff, tenants and our business due to unknown particles being discharged into the air. We are concerned that these unknown and potentially toxic airborne particles will be carried by the prevailing winds towards our business and surrounding areas of Prebbleton, Halswell and Hornby.

1. We have onsite 25+ people at any one time and take great care with our health and safety on site, hence we want our staff to feel safe at work. This can be applied to the hundreds of workers at businesses in the near vicinity of the proposed toxic site who although don't live nearby but spend their life working as default sensitive receptors while this plant is operating in there near vicinity and will potentially have their lives affected on a daily/weekly basis from dangerous air particles.
2. Noise emissions from the proposed open-air tyre shredding plant and the impact this noise could have daily to our business and property values. The potential toxic dust to the air from this open area that could contaminate our land, thus affecting our land and ultimately the grass that our livestock feed on.
3. Water supply for our stock is drawn from our well on site as is our drinking water for family and staff. The potential contamination to this supply either by aerial contamination is a risk we are not prepared to endure.
4. Odours from this plant during the processing of toxic waste are of additional concern we have finally received the removal of the Meadow Mushroom plant from our community this additional discharge is not something we need to be subjected too.
5. Transport of the waste to the proposed site. We are situated at the intersection of a main thoroughfare that leads to the proposed toxic site and could face an additional risk of a major contamination from unprocessed material to the site due to a road accident.

We are concerned with the potential loss of value to our business and land due to the contamination.

Intensifying operations at an existing site for efficiency and profitability is not a good reason to increase the risk to the community.

The location is totally inappropriate. Any processing plant handling toxic waste including pesticides and herbicides should be at least well away from ANY residences and especially away from an area of growing population.

We would ask that Ecan turn down this application and the applicant look at site selection in an area that is fit for purpose.
