Reasons comment:

We are facing a climate emergency. Without urgent action, our planet will soon collapse

under the stresses we are of imposing, particularly those of greenhouse gas emissions. It is absolutely irresponsible to allow the continued extraction of fossil fuels, and this project needs to be completely eliminated as it will have severe negative effects on the entire population. We need to protect our country and our planet for future generations, and to protect the health and well-being of society as we know it. Discharge should be completely prohibited as the release of pollutants into our environment is already having severely negative effects on many aspects of human life. Under no circumstances should this be allowed. In the same way, water extraction should also not be allowed, as the region already experiences severe water shortages, and this is an unreasonable use of a public resource.
