Reasons comment:

Coal kills the climate. We must stop producing and using coal if we are to bring

emissions down. The low-grade coal from this mine is used locally for industrial heating, a use for which climate-friendly alternatives exist. Currently the Resource Management Act does not allow 'climate impact' as grounds for refusing a consent. But this RMA clause is being reviewed and is likely to be changed to be compatible with the Zero Carbon Act. In 2019 ECan committed to declaring and acting on a climate and ecological emergency. As elected representatives, your primary responsibility is to the health of your local population and whenua. The mine supports an unsustainable model of land-use. 90% of this low-grade coal goes to Fonterra dairy factories. Their commercial model (the intensive production of low price/high volume commodities) requires a degree of irrigation, fertiliser use and livestock overstocking that is harmful to both the natural environment and human health. Calls for a change to this model are growing steadily stronger and more mainstream. Disregard for environmental degradation and threat to biodiversity. It is alleged that Bathurst have repeatedly breached their existing consents for discharge to local waterways that are the habitat of the endangered Canterbury mudfish. We have no confidence that they will not continue to do so. Harm to local environment and community. As well as the effect on indigenous species and cultural values, Selwyn D.C. has identified the effect of noise and dust, pollution of local waterway, damage to landscape and overall amenity values as being more than minor. Bathurst has allegedly failed to provide the required information on these issues.

Consent comment:

That they refuse to give consent to the proposal of Bathurst Coal Ltd.
