Reasons comment:

I am concerned about climate heating and the effect the burning of coal from this mine will

have on our planet. The planet has already warmed 1 degree in a century because of human activity - emitting greenhouse gases. Burning coal for energy means emitting more CO₂. We have been told by the IPCC that we need to limit temperature rise to 1.5 degree C to avoid catastrophic runaway climate change. They advised cutting CO₂ emissions in half by 2030 and nil emissions by 2050. Mining more coal will result in more CO₂ emissions and a hotter planet. There is a 40 years plus time lag between emitting CO₂ and its effect on the planet being manifested in climate warming. This makes it hard for us humans to recognise that it is an emergency and we need to reduce emissions rapidly. Please recognise this time lag and protect our grandchildren and their grandchildren by keeping the coal in the ground

Consent comment:

Refuse all consents for extending the coal mining When possible slowing or stopping existing coal mining activities
