Subject: Submission on draft Annual Plan 2022/23

Anonymous User just submitted 'Draft Annual Plan 2022/23 submission' with the responses below.

First name

Ollie

Last name

Grenfell

Email address

Suburb

Waltham, Christchurch

Are you submitting on behalf of an organisation?

No, I'm submitting as an individual

Which age category are you in?

25-39 years old

Do you wish to speak to your submission at a Council hearing?

No

Which bus fare structure option would you like to see trialled?

Option 2: \$2 flat fare for adults and \$1.20 for children across bus zones 1, 2 and 3

Tell us more about why you support the selected bus fare option.

Selwyn and Waimakariri are both growing a lot and those routes need to be less congested as much as any within Christchurch

Any other comments on bus fares?

I would like to see completely free public transport options, but that needs to come from central government. Rates aren't going to cover it properly. And in the mean time, still having to pay a little bit means people might be more respectful

Is borrowing and repaying through general rates the right approach for this regionally significant event?

Don't know

How else might we pay for our share of this work?

Better insurance upfront? A central government climate fund that comes from carbon taxes?

How do you think recovery from flooding of this scale – events that impact state highways, bridges, rail and power for example – should be funded in the future?

A central government climate fund that comes from carbon taxes

Which option for distribution of rates in Ashburton River rating district do you support?

I don't have a preference

Any other comments on flood protection in Ashburton?

What about a small road toll for driving through the key bridges etc. in the area? Seems like a lot of people like having roads and bridges, not just the people who actually live there.

Would you support a levy to accelerate action in response to climate change?

No

Any other comments on future funding for responding to climate change?

This is not a rates issue, it needs a country wide solution that is 90% funded by carbon tax etc. Anything that means the people/companies impacting the climate the most are the ones who pay the most.

Where did you hear about the consultation?
