Which bus fare structure option would you like to see trialled?  Option 1 (preferred): Fare-free for under 25s, students, Total Mobility and Community Services card holders  Tell us more about why you support the selected bus fare option.  I would like to see people who experience more barriers to access public transport have improved flexibility in the options available to them to move around the region. I would also like there to be a media campaign that promoted the changes as part of the trial.  Any other comments on bus fares?  I would encourage ECan to look at models in other regions where businesses provide increased incentives or fund up to a specific amount for employees to utilise public transport. It may begin with larger, for-profit companies and expand however it's a viable option to decrease emissions, improve the public transport useage and support public well-being by decreasing commute times.  Is borrowing and repaying through general rates the right approach for this regionally significant event?  Yes

How else might we pay for our share of this work?
Tolls for roads may be an option since it could be funneled into general maintenance and transport/safety improvements as well as regional events that cause damage to transport options.

How do you think recovery from flooding of this scale – events that impact state highways, bridges, rail and power for example – should be funded in the future?
Tolls on roads for transport to ensure there will be funding available in the future.
Which option for distribution of rates in Ashburton River rating district do you support?
Option 1 (preferred): Redistribute rates in the Ashburton River rating district.
Would you support a levy to accelerate action in response to climate change?
Yes
What current or future projects or activities would you like to see funded by such a levy?
I would like public transport to improve in the city and to disincentivise driving (i.e. tolls on motorways, etc) as part of the future projects.
Where did you hear about the consultation?
